Hilton/Processing issue – linkSrpDownloadAndResolveOptimizedStep – java.lang.ArithmeticException: / by zero

Hello Team,

This document explains the process to handle the processing failure observed for Hilton –

Step Name : linkSrpDownloadAndResolveOptimizedStep

ERROR –

java.lang.ArithmeticException: / by zero

We have received 0 rates against LV0 causing the processing failures.

Steps to verify –

- 1. Download the extract for the failed processing.
- 2. Extract the files from Tar.z extract file.

3. Open .room_rates file in Excel.

The screenshot displays the Microsoft Excel interface with the 'Data' tab selected. The ribbon includes options for Data Types, Sort & Filter, Data Tools, Forecast, and Automation. The main workspace shows a data table with 21 rows and 26 columns. The columns are labeled A through S, with an additional column for 'Rate'. The data represents various financial metrics over time, with dates in the first column and numerical values in the subsequent columns. The data table is visible below the ribbon, showing a grid of cells with numerical values.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	Rate

4. Do Text to Columns.

The screenshot shows the Microsoft Excel interface with the 'Convert Text to Columns Wizard - Step 2 of 3' dialog box open. The dialog box is titled 'Convert Text to Columns Wizard - Step 2 of 3'. It has a 'Delimiters' section with the following options: ☒ Tab, ☐ Semicolon, ☐ Comma, ☐ Space, and ☒ Other: []. There is also a checkbox for 'Treat consecutive delimiters as one' which is unchecked. The 'Text qualifier' is set to '-'. The 'Data preview' section shows a table with columns 'rates', 'ROLLA', and 'date'. The first few rows of data are visible. Red circles 1, 2, and 3 highlight the formula bar, the 'Data' ribbon tab, and the 'Convert Text to Columns Wizard' button respectively.

6. Filter Rack Rate Level (Rtlvl) Column

The screenshot shows the 'Rate Level (Rtlvl)' filter menu in Excel. The menu is open, displaying various filtering options. The 'Number Filters' section is expanded, showing a search bar and a list of dates. The date '1/28' is selected, indicated by a red circle with the number 2. The 'OK' button is highlighted with a red circle with the number 3. The background shows a table with columns for 'Record Type', 'Property Code', 'Rate Riv (A = BAR SRP, 0 = rates at roomtyp elevel)', and 'Rack Rate Level (Rtlvl)'.

7. First Person Rate, Second Person Rate, Third Person Rate, and Fourth Person Rate must not have zero values.

8. Copy and save the above data in new excel.
9. Escalate the issue to the Client.

Email Template –

Email Subject: HLTN/<Property Name>(<Property Code>) – GRO – Processing Issue
– <Date> <Month> <Year>

Email Body –

Hello GRO Support,

I hope this message finds you well.

We would like to bring to your attention a processing issue for the below property

Property Code: <Property Code>

Property Name: <Property Name>

Upon investigation, it has been observed that we have received 0 rates against LVO causing the processing failure.

Please find the attached sheet for your reference.

We kindly request you to correct this at your earliest convenience.

Once a corrected extract is delivered, we will catch up with the property.

If you have any questions or require further clarification, please feel free to reach out.

Thank you for your prompt attention to this matter.

10. Claim the failure. [Do not abandon/stop/continue/resume]

11. Once we have the response from the client specifying that correct values are sent, download the next subsequent BDE extract and follow the steps 2 to 8.

12. If we are still receiving 0 values against LVO – Escalate it to client again.

13. If the values are correct in BDE extract –

1. Abandon all the running jobs.

2. Change the System Mode to "Population" from the Installation screen.

3. Do the Catch-up from the Installation Status Screen. Go to Installation Status Screen. Enter the Property Code and click on the Apply button.

4. Select the Property Code and click on Data Mapping.

5. Data Mapping Screen will pop up, click on Data Mapping button.

6. This will initiate the CRS Catchup job.

7. Once the CRS Catchup job is completed, change the System Mode to Decision Delivery/previous System Mode and Save.

- 8. In case, the system does not allow you to save because of “Connectivity Location” and Transport Mechanism Type not specified. Please mention the Connectivity Location as Hotel and Transport Mechanism Type as FTP and save.
- 9. Once the property is in Decision Delivery/Previous System Mode, reprocess the latest correct BDE extract from the Installation Screen.

Note: In case any extract is abandoned by mistake, perform the catchup from steps 1 to 6.Set “pacman.ratchet.differentialTransPopulation” to false and continue from steps 7 to 9.Revert “pacman.ratchet.differentialTransPopulation”.

14. After successful completion of BDE, send closure on external/internal communications.
