How to look up Inventory messages for an OXI property

You can use the below REST call to look up all the Room Types that an OXI property has by keying in relevant components :

Before you execute this note that you use this REST call with **precaution** – given that a property may have a lot of inventory messages and if you tried to accidentally pull all the messages – it may impact performance on NGI and this should clearly be avoided.

<http://us2pngiap01.ideasprod.int:9090/nucleusInventories/search/findByClientCodeAndPropertyCodeAndOccupancyDate?clientCode=<clientcode>&propertyCode=<propertycode>&occupancyDate=<occupancyDate>>

You can get the property code from IDeaS G3 RMS by following the process outlined [here](#)

The information that would be returned would have following details for a 'given' occupancy date at two levels

1. Total Hotel
 1. Total Hotel Capacity
 2. Total roomSold
 3. Total transientSold
 4. Total groupSold
2. All room types – each room type is denominated as roomTypeCode in the result string
 1. Room capacity under totalAccomCapacity header
 2. Out of Order rooms as roomsNotAvailableMaintenance

3. Out of service as roomsNotAvailableOther
4. Number of room solds for that room type as roomSold

Below is a how an entry looks for the totals at the hotel

```
"lastModifiedDate" : "2017-11-16 00:50:06.883",

```

You can view a sample json string for a hotel – however you must re-save the file to a normal txt file or json file – the file could only be saved with a pseudo extension 'json' – which is a misnomer for .json . [Link to the file is here](#)
