How to resolve OptimizationServiceStep failures

You may encounter the processing failure in below steps on any PROD.

Step Name: *BDEOptimizationServiceStep / CDPOptimizationServiceStep*

Problem Description:

Error:The optimization end date specified (****) occurs after the forecast end date (****). : Warning:log_file_name is C:\SAS\Logs\SAS_****_****_**_****.log :
Warning:Inhouse Demand Forecast Type: Currently only Qualified yieldable (default) and Qualified non-yieldable are supported. Reset to default.

Steps to resolve this issue are as follows :

1. Abandon the current processing job and other running jobs if any.
2. Set
pacman.core.property.sync.syncRequiredAccommodationConfigurationChange
d to true.
3. Run the Sync for the property and let it complete successfully.
4. Reprocess the pending extracts from Installation screen.

Note: In case processing failure for HILTON properties; reprocess the T2SNAP from Installation screen for the abandoned one.

If there are any pending extracts – select CRS extract type while reprocessing.

This workaround must resolve the issue. In case it fails escalate it to G3 SPM M Escalation team.
