## ICS – Opera Agent to OXI Migration (Internal)

### Pre-Requisties:

- SFDC Case entered by CPM/CRM:
  - Agent to OXI Migration date.
  - OXI Implementation form attached.
  - Oracle/Hotel IT resource name and email id mentioned at the case level.
  - OXI URL and credentials (if any) provided at the case level.

### Overview:

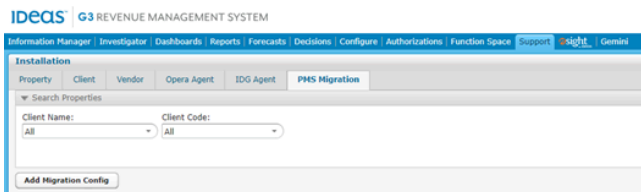

This document lists the requirements and procedure necessary for a successful Opera Agent to OXI migration. The configurations changes need to be followed in the described manner. Once the date of migration is identified, we need to plan and execute the migration accordingly.

Also, it is very important that we liaise with the QA(Kalam) team in case there are any queries or doubts during the migration process.

### Procedure:

#### 1. Pre-Config:

1. Based on the migration date provided to us, we can go ahead and do some pre-configurations accordingly.
2. Set the property level parameter *pacman.feature.PMSMigrationEnabled* to **true**.
3. Login to G3 RMS and go to **Support->Installation->PMS Migration**

3. Click on **Add Migration Config** which will open the below window

 The 'PMS Migration Configuration' dialog box contains the following fields and options:
 

- Client:** A dropdown menu.
- Property:** A dropdown menu.
- Current External System:** A text field.
- New External System:** A dropdown menu.
- Last Extract Date From Current External System:** A date picker.
- First Extract Date From New External System:** A date picker.
- Have room types changed:** A dropdown menu with 'No' selected.
- Have segments changed:** A dropdown menu with 'No' selected.
- Have rate codes changed:** A dropdown menu with 'No' selected.
- Buttons:** 'Save' and 'Cancel' buttons at the bottom right.

Select the appropriate options from the drop-down list.

- **New External System:** Select the option OXI
- **Last Extract Date From Current External System:** This is the last processing that will occur under the Opera Agent.
- **First Extract Date From New External System:** This can be set to the next day(OXI install/testing day)

## 2. Switching the Agent to OXI:

Once the processing is completed for the set date(Last extract from Opera Agent), an **alert "PMS Migration – Configure Inbound"** is generated on the **UI**. This puts the property in **System Dormant Mode**.

We can now go ahead perform the below configuration changes:

## a. G3 Configurations

1. De-associate the property from its Opera agent.
2. If there is a single property on the agent, you can suspend the Opera Agent so that no new extract is created.
3. Change the below property level parameters:
  1. *core.property.externalSystem* – **NGI**
  2. *core.property.externalSystem.subSystem* – **OXI**
  3. *integration.ngi.qualifiedRateDeferredDelivery* – **false**
  4. *integration.ngi.unqualifiedRateDeferredDelivery* – **false**
  5. *integration.timeToCheckAuditDate* – set it as per the expected BDE RTAV time(Closest to night audit completion).
  6. *integration.oxi.url* – *Provided by client/Oracle*
  7. *integration.oxi.outboundUsername* – *Provided by client/Oracle(if applicable)*
  8. *integration.oxi.outboundPassword* – *Provided by client/Oracle(if applicable)*
  9. Note down the timings and then delete any existing IDP's.

## b. NGI Vendor Configurations

1. Add the property in NGI vendor configuration using the information provided under the implementation form.
2. Make sure below mentioned property level parameters are set to **true**
  1. *"unqualifiedRatesDirectPopulationDisabled"*
  2. *"qualifiedRatesDirectPopulationDisabled"*
3. Once the above-mentioned configurations are completed, we can resolve the alert(PMS Migration – Configure Inbound) in the UI. This will move the property in **Data Population Mode**.
4. On the OXI installation/testing day(which is usually the very next day), we need to follow the regular steps along with some modifications.
  1. The start dates for **Rate**, **Block** and **Stay** should be **32** days in the past from the current date.
  2. Make sure you edit the H&F report to start from past **2** days from the day of install.
5. Do not directly populate the data in G3.  
Make sure you assign a task to QA(Kalam) team to verify the incoming data from their OXI interface.  
Based on the feedback received from QA, we might need to manually make some changes.
6. Enable the processing in G3 once we get a go ahead from QA. Request QA team to verify the data once again.
7. Assign a task to ROA team to perform a D.V. ROA team will further share the findings with QA and the PM/CRM.
8. If all the parties are fine with the data populated in the G3, we can enable the decision uploads accordingly(Provided it was originally in the Decision Delivery Mode).

9. Request the connectivity of the Agent machine and de-install the opera agent for the property.
