1. Check if the property is configured on NGI under the Integration – MEWS and Vendor – MewsAPI 2. Set dailyBarRateCode – Rate code that will be set in the DailyBar decisions – Should be

provided on the case level in the Decision Upload case

3. Set decisionsThreshold – Number of the decisions per one chunk/tracker – Should be set to 500 always. Note – if the decisions fail with the error related to chunk size, this can be increased to 800
4. Set pricingAndLrvRounding – Add rounding for Daily Bar Decisions – Should be set to 2 unless stated otherwise.

G3 Configurations –

Go to Configurations → Select Client & Select Property –

1. Set pacman.feature.DecisionDelivery1Enabled to true
2. Open Outbound Data – find DecisionDelivery1 Outbound Vendor
3. Enable Required Decision Types (Daily BAR, Min LOS, Agile Rates, etc) – Set the format to “differential”
4. Configure the Daily BAR Rate code as per provided in the case in the parameter pacman.integration.DecisionDelivery1.DailyBAR.dailybarRateCode
5. Set pacman.integration.DecisionDelivery1.vendor as MewsAPI
6. Set pacman.feature.decisionDeliveryBaseUrl as <https://decision-delivery-internal.ideasrms.com>

Pushing Decisions –

1. Go to G3 UI → Support → Installation
2. Navigate to Process Data tab and Reprocess the latest extract

Note : As of now, there is no option present to push the decisions just to MEWS API channel individually, so for now we have to reprocess the extract and send decisions to all channels in case a repush is required.

Monitoring Decisions –

1. Go to G3 UI → Support → Monitoring Dashboard
2. MEWS API Decisions can be monitored with NGI Decision Delivery Job and NGI Decision Delivery By Type Job
3. MEWS API Acknowledgements can be monitored with NGI Decision Delivery AcknowledgementJob

Note – If the decisions fail to upload, the jobs NGI Decision Delivery Job and NGI Decision Delivery By Type Job will be marked as completed and the NGI Decision Delivery AcknowledgementJob will fail.

Once all 3 jobs are complete, the decisions have been successfully uploaded to MEWS API

Note : If there are IDPs that need to be set, please reach out to me or Sujitkumar as those need to be configured in MEWS API as well as G3 through Swagger
