IDeaS G3-RMS OPERA Agent Installation and Reinstallation Guide (The same process to be used for Hyatt for OHIP Emulator)

****For Hyatt: Refer to Step 9. Point 5.**

Overview

This document guides you through the installation and setup of IDeaS Opera Agent, which includes the IDeaS Data Exchange component. This service is responsible for communicating with the IDeaS ASP (Application Service Provider) server through the Internet to transfer IDeaS extract data and decision data.

The section, **Before You Start**, details the preparation steps to be followed and the information you should have to hand before commencing the installation.

The subsequent section – **Detailed Instruction Guide** – provides step by step instructions along with screen shots where applicable.

Please contact your IDeaS Client Project Manager or the IDeaS CARE Team if you have any questions.

Pre-requisites

Before proceeding further, ensure that you have read and fully understand the Requirements Guide document and the following installation prerequisites are in place:

- Ensure that you have activated any applicable ORACLE / Opera integration licenses required to support both data extraction and/or decision upload functions for your IDeaS G3 RMS platform.
- The login you are using to install IDeaS Opera Agent must have administrator rights and privileges.
- Internet connectivity must be available for the machine expected to install the IDeaS Opera Agent.
- The install file for installing the Opera Agent is located within this document installation steps.
- Internet connectivity must always be accessible for the machine expected to run the IDeaS Opera Agent.

If you have any questions regarding the Opera Agent installation procedures, please contact your System Administrator or the IDeaS CARE Team before proceeding any further.

Before You Start

Please Note: Please ensure that your designated server meets or exceeds the machine specification detailed in the ‘*INTEGR – IDeaS G3 RMS Opera Agent Installation System Requirements 2.0*’ document.

- Please ensure that the login you are using for the computer on which you will be installing IDeaS Opera Agent Manager has administrative rights and privileges.
- Please save a copy of the file obtained from the IDeaS CARE team on the desktop of the computer the IDeaS Opera Agent will be installed.
- If there is a Proxy Server being used for internet connectivity, have the username, password, IP address and port number available during the installation.

- Please ensure that drive mappings, internet connectivity, and power supply are always accessible by the computer designated to run the IDeaS Opera Agent Manager i.e. it should never be powered off except for planned maintenance.
- Prior to installation, the IDeaS CARE Team will provide you with certain credentials required to configure the Opera Agent. Please ensure that these values are available before downloading the Opera Agent.
- Save a copy of the Opera Agent installation file on the computer desktop from here <https://asp.ideas.com/download/OperaAgent/>

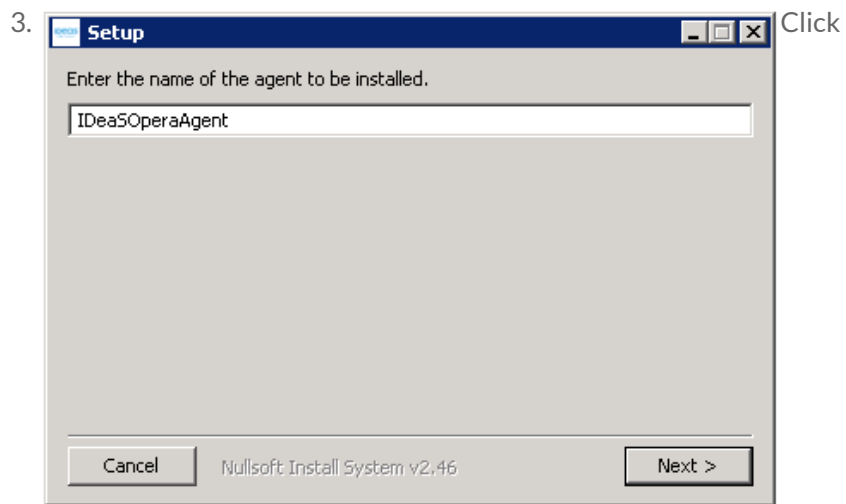

Detailed Instruction Guide

Installation of IDeaS Opera Agent at ORACLE Data Center

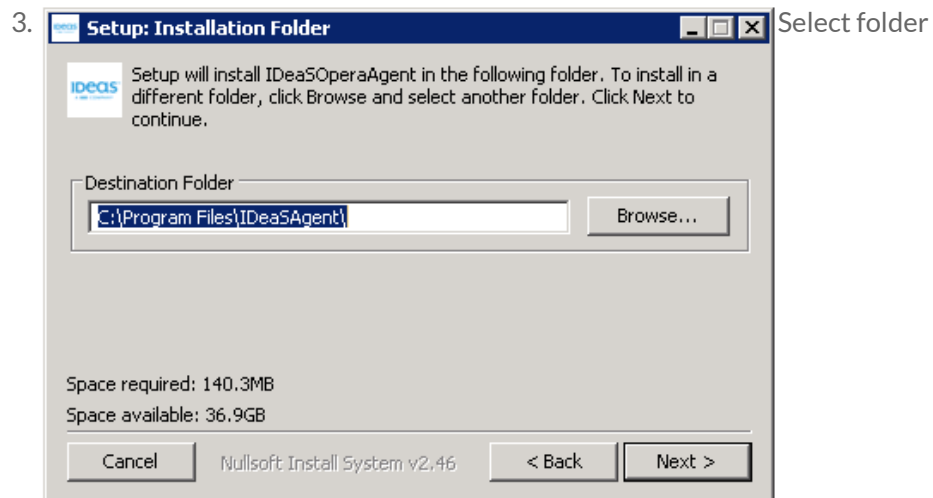

Install Agent Manager

1. Save a Copy of the Opera Agent Manager Installation File on Desktop
 1. Click on the URL from the following location:
<https://asp.ideas.com/download/OperaAgent/G3OperaAgent.zip>
 2. Open zip file when download has completed
 3. **SAVE** a copy of the file to the desktop
2. Install Agent Manager on Remote
 1. Double click on OperaAgentInstaller.exe to initiate install
 2. The below popup box will appear. (Changing the name is optional.)

NEXT to continue

location of Opera Agent Manager to be installed. Click NEXT to continue.

4.  Select shortcut

location. Click NEXT to continue.

5.

6. Update Port number if different from what is listed. Click INSTALL to finish installation process.

6. Completed install of Agent Manager will display below screen. Click Close once the below screen appears.

7.

After successful install of the Agent Manager, the below screen will appear to configure the Agent Manager settings.

Configure Agent Manager Settings

8. Click on link **Agent Manager Settings** which will display a popup box. Enter the below credentials to access configuration screen.

1. Username = ideasadmin
2. Password = IDEaS123

9. In the installation email from the IDEaS CARE Team the below information is provided to configure the Opera Agent Manager:

1. G3 Client ID
2. G3 Agent ID
3. G3 Username
4. G3 Password
5. G3 Server Base URL: <https://g3rms.ideas.com/pacman-platformsecurity/rest/> (For **Hyatt G3** use the following URL: <https://ohip-emulator.ideasrms.com/>)
6. Enter in Proxy information if required
7. Click SAVE
 1. After clicking SAVE, it may take up to 15 minutes to provide a G3 Agent Version. You may need to refresh

Opera Agent Test Connection Messages

10. Once a value populates in the G3 Agent Version field, this will complete the successful install of the Opera Agent Manager.
 1. If you are having issues receiving a G3 Agent Version, contact the IDEaS CARE team.

Once above steps are complete, please send communication that Agent Manager Installation steps are complete to CARE@ideas.com.

The IDEaS CARE Team will then add properties into G3 RMS. Once properties are added into G3-RMS, the IDEaS CARE Team will the send communication back that tasks are complete. After which, Client should take the next steps to configure property settings.

Configure Property Settings on Opera Agent

11.

Go to the G3 Opera Agent Screen and click on Property Settings link.

12. Log in for Property Settings:

1. Username = ideasadmin
2. Password = IDeaS123

13.

The below screen will appear after logging in and the properties which have been added to the Remote Agent will appear in the top left corner.

14. Click on box to “Enable PMS for Property”. This will enable you to enter configuration details.

15. Select one property at a single time to configure.

16. Enter the below details:

1. Resort
2. Username
3. Password (Click on Reset Password Link)
4. Database Host
5. Port
6. Database Connection Type
7. Database Name
8. Database Schema
9. Database Username
10. Database Password (Click on Reset Password Link)

17. Update password by clicking “Change Password” links

18. Once all information is updated in the Property Configuration screen, click

19. Click Test PMS Connection

20. If connection is successful, the below will appear. If connection is not successful, it will state PMS Connection was unsuccessful.

20. Click “Copy Database Configuration” button to copy the same configuration information for additional properties.

Sending Confirmation to IDEaS

When you have completed the installation of IDEaS Opera Agent Manager, please reply to IDEaS’ original installation email indicating you have completed the installation.

Test Connectivity

From the PC1, test connectivity to <https://g3rms.ideas.com>.

If connectivity to the site mentioned above does not work, it could be due to firewall settings. If errors are encountered, please send the results of any problems to the IDeaS Client Project Manager and CARE team, and they will work with you to resolve any issues.

Any Questions?

Please contact IDeaS CARE Team at CARE@ideas.com.

Opera Agent Test Connection Messages

Reinstallation:

In case of Re-installation, follow the above, however there are two additional steps as follows:

1. Download an extract prior to reinstallation.
2. Change the system mode in the G3 RMS UI to Data Capture
3. Note down the current system mode (example , if it is Decision creation, then we need to move it to the same after reinstall)
4. Perform the reinstallation be following the above Agent installation steps
5. For the verification download the extract using the following URL:

<https://g3rms.ideas.com/pacman-platformsecurity/rest/dataTransfer/downloadData?propertyId=<Property-ID>&correlationId=<Correlation-ID>>

Enter propertyid and correlationId of the extract . **If the property is in Prod 3, use G3RMS03 instead of G3RMS.**

Verify the capacity and room revenue in the new extract with that of the previous extract downloaded in Step 1. It should be the same.

If same, then change the system mode to the original mode as per step 2. If not, then verify with the client if the database has correct data and the resort code is correct.

 +1
