Identifying Summary Statistics Error – “Physical Capacity Category Code Invalid for Date {0}”

Applicable To: G2 and G3 – NGI/HTNG Properties

Purpose

This document provides guidance for identifying and resolving the error: “**Physical Capacity Category Code** invalid for Date {0}”

This error commonly causes summary statistics to appear as **INCOMPLETE** on the Installation screen and for G2 start from Step 1.

Edit Property Data	Excluded Dates	Decision Configuration	Data Loads	Process Data	Message Health	Automation Manager	Core Settings	Inbound	Integration Questionnaire	Outbound	Special Care

Step-by-Step Investigation Process

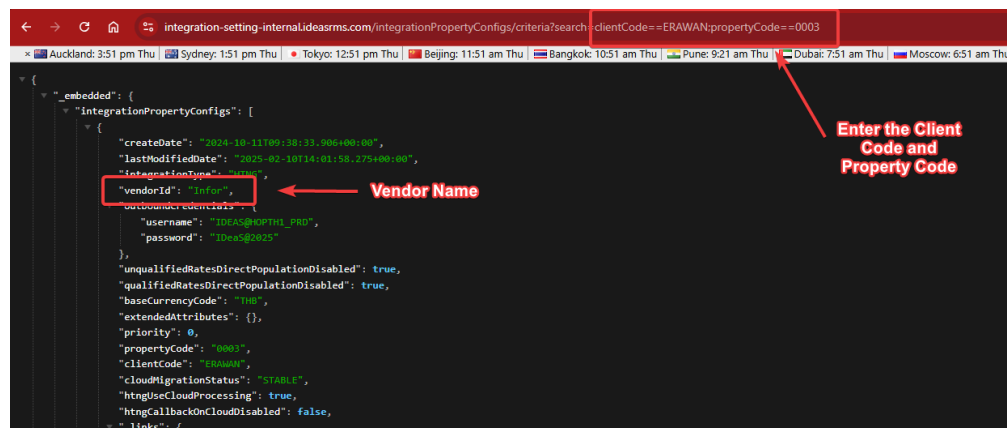

Step 1: Identify the Vendor Name

Use the Integration Property Configs tool to find the vendor associated with the property:

URL:

<https://integration-setting-internal.ideasrms.com/integrationPropertyConfigs/criteria?search=clientCode==<ClientCode>;propertyCode==<PropertyCode>>

Replace **<ClientCode>** and **<PropertyCode>** with the actual values (e.g., ERAWAN and 0003).

Step 2: Use the HTNG Troubleshooter Tool

Once the vendor is identified, access the HTNG Troubleshooter to diagnose the summary statistics issue:

URL:

<https://htng-troubleshooter.ideasrms.com/troubleshootV2/#!/Troubleshooting/tId%23null>

Instructions:

- Fill in all required fields: Vendor Name, Client Code, Property Code, Date Range
- Select "Statistics" from the troubleshooter options.

Step 3: Analyze the Error Type

Look for the following error under the Error Column in the statistics section:

Error: Physical Capacity Category Code invalid for Date {0}

This error indicates that the physical capacity value is set to zero for one or more dates

Step 4: Verify in the STAT XML Message

Download the SOAP XML of the affected STAT message and examine it.

Key Detail to Identify:

- Look for the **CountCategoryCode='8'**
- If the associated value is 0, this confirms the error.

Root Cause Explanation

- CountCategoryCode='8' corresponds to Physical Capacity, i.e., the total number of rooms available in the hotel.
- A value of "0" is invalid and leads the system to mark the statistics as **incomplete**.
- Prior to the error date <ISSUE DATE>, the correct physical capacity value was being received. The issue begins when this value changes to "0" from a specific date onward.

Subject: <Chain Code>/<Property Name> – IDeaS G3/G3 RMS – Invalid BDE/IDP
Summary Statistics Received – DD-MM-YYYY

Hello <Client Name>,

We would like to inform you that we are encountering an error in the <BDE/IDP> summary statistics for the property, which is currently preventing the system from processing data correctly.

Issue Summary:

The system has flagged the statistics as incomplete due to the following error in the STAT message <STAT NAME>:

Error: Physical Capacity Category Code invalid for Date {0}

This error indicates that the Physical Capacity (CountCategoryCode = ‘8’) is being reported as “0” starting from <DATE>, which is not valid.

For example, for (Message ID: <Available in troubleshooter>), we were receiving a capacity until <SUCCESS DATE>, but starting from <ISSUE DATE>, the value changed to “0”.

Action Required:

Please liaise with your vendor (<Vendor Name>) to:

- Correct the physical capacity values in the property configuration
- Re-push the summary statistics for the affected dates

We have attached the relevant **SOAP XML logs** that indicate the exact dates and structure of the issue to help with your investigation.

Once resolved, kindly inform us so we can resume processing the summary statistics.

Please reach out if you have any questions or need further assistance.

Best regards,
[Your Name]
