MEWS / OMNIBOOST HTNG INTEGRATION WITH IDEAS

IMPORTANT NOTE

This is the Onboarding document which has been provided by the IDeaS Integrations Team to support both – Volkshotel and various teams (Mews side and IDeaS side). This document outlines IDeaS Integration with Mews PMS where Omniboost facilitates the integration.

As per the process, it is vital to go through the process prior to data capture from Mews PMS. There are critical checks that need to be done to prevent errors when onboarding which may result delaying the process. This documentation is purely to help support the configuration required in Mews to facilitate a Integration with IDeaS Revenue Management Systems.

Introduction

This document will outline IDeaS Integration with Mews PMS where Omniboost facilitates the integration. It is strongly recommended that you consult with your Mews Account Manager and IDeaS contact prior to requesting to initiate either data capture or decision upload to Mew PMS with IDeaS RMS.

Disclaimers

It is important to note that this documentation is not intended to replace support from Mews PMS in any way and that these documents contain the required

configuration steps to support first data capture and decision upload between IDEaS RMS and Mews PMS to the best of IDEaS' knowledge. The contents of these documents may become outdated or may change without notice should functionality within Mews PMS change. IDEaS Revenue Solutions does not support third party products and takes no responsibility for the configuration of these systems nor any problems which arise as a result of any configuration changes in third party systems. This documentation is purely to help support the configuration required in Mews to facilitate a Integration with IDEaS Revenue Management Systems.

Integration Capabilities

Inbound Data Capabilities

- Reservations
- Group Messages
- Summary Property Statistics as part of Business Day End
- Intra Day Processing – to be discussed with IDEaS. Requires specific configuration and agreements
- Component Rooms (G3 RMS Only)

Decision Upload Capabilities

Decision	Supported	Notes
Daily Bar	Yes	Delivering Daily Best Available Rate by Room Type
MinLOS	Yes	Delivering Minimum Length of Stay by Rate Code / Room Type. Based on arrival occupancy night

Development work

- Overbooking by Hotel
- Overbooking by Room Type

Work is constantly being done to improve integration capabilities and it is therefore advisable to reach out to your IDEaS Account Contact for further information.

Mews PMS Requirements and Setup

System Requirements

Minimum System Version – Not applicable to Mews as a cloud-based PMS

License Requirement – Refer to Access Token below

Create a login with Administration Rights for user info@omniboost.io. Advise support@omniboost.io that this has been done. (this allows the Omniboost team to perform pre-onboarding checks prior to data sync)

It is the clients responsibility to ensure all preparation is done prior to activating the integration to avoid delays.

IDeaS Questionnaire – please always ensure that you reach out to Mews and IDeaS for support with completing questionnaires.

Mews Services

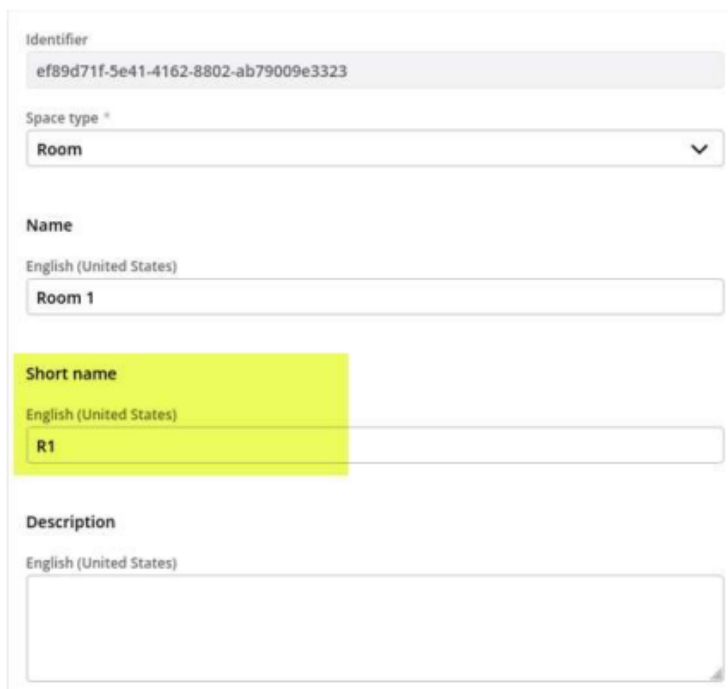

IDeaS will only integrate with the Bookable Service that manages your physical reservations. IDeaS does not integrate with any other Bookable services and Additional Services. If you have more than one bookable service, then please reach out to your Mews and IDeaS contact.

Space Categories

The Space Category is what will be sent to IDeaS as the Room Type and therefore is mandatory.

Only physical bedrooms are to be uploaded to IDeaS. Any Internal Banqueting, Account or Pseudo Type rooms should not be included in the data sent. In cases where a physical room is moved to a pseudo or account room, please notify your IDeaS contact prior to installation so that these can be configured within the RMS application prior to first data capture.

Settings -> Services -> Bookable services -> Space categories -> Short name is mandatory. Enter without spaces.

A screenshot of a web form for creating a space category in Mews. The form is titled 'Identifier' and contains several fields. The 'Identifier' field is a text box with the value 'ef89d71f-5e41-4162-8802-ab79009e3323'. Below it is a 'Space type' dropdown menu with 'Room' selected. The 'Name' section has a label 'English (United States)' and a text box containing 'Room 1'. The 'Short name' section is highlighted in yellow and has a label 'English (United States)' and a text box containing 'R1'. The 'Description' section has a label 'English (United States)' and a large empty text area.

Important Information –

The Short name within space category in Mews is what IDeaS uses to identify the unique room type.

Reference: Create or delete a space category in Mews

<https://help.mews.com/s/article/create-or-delete-a-space-category>

It is important that you advise IDeaS if you have (Component Rooms/Virtual Suites), identified as Parent & Child Rooms setup in Mews. If you are unsure please reach out

to your Mews and IDeaS contact.

Out of Order (OOO) vs Out of Service (OOS) in statistics

OOS is a space status like Clean, Inspected, Dirty. This status does not take up inventory and is therefore not counted in inventory statistics in Mews

OOO represents a block on the timeline that takes up inventory in Mews. These OOO blocks are counted in statistics in IDeaS

Rate Code Setup

Settings -> Services -> Bookable services -> Rates -> Short Name is Mandatory

Service
Stay

Base rate

Pricing classification
*

Name
English (United States)
Best Price

Short name
English (United States)
BP

Important – When setting up Restrictions in IDeaS, the Short name is the Rate Code and unique identifier between Mews and IDeaS. This is what should be used.

Reference: Create a rate in Mews

<https://help.mews.com/s/article/create-a-rate>

Mews Shortname Setup

The Shortname Language setting for all languages should match the shortname setup as per screen grab below. This is applicable for both Rate Codes and Room Types.

Mews Restrictions

The Mews restrictions overview displays the creator of each restriction (e.g. IDeaS or an employee of the property). It is possible for users to create their own restrictions, which will sit alongside the restrictions created by IDeaS. Users and integration partners can only touch their own restrictions.

Be very mindful when creating, or modifying restrictions in Mews, especially when the majority of restrictions is managed in another system.

Account Category Setup to support Data Push

In order for data to be accurately received a Account Category assignment is requires for the primary Stay Service Accommodation. Failure to set this up correctly will result in transactions failing and data discrepancies.

Mews PMS Setup to accept IDEaS Decisions

Supported Decisions

- DailyBar By Room Type and Rate Code (*refer to note below)
- Minimum Length of Stay by Room Type by Rate Code

Mews PMS Rate Code and Restriction Setup to support decisions

***DailyBAR By Room Type and Rate Code:** It is important to understand that when IDEaS sends pricing to Mews PMS, only the 1 or 2 Adult pricing is populated and IDEaS is not able to update both the 1 & 2 Adult value. The configuration created within Mews PMS for the offset calculation will then manage the value on the price that IDEaS is not able to price. Setup Accounting Categories Classifications

Account Category Setup to Accept Decisions

Settings -> Property -> Finance -> Accounting categories

Rate Code Setup

RatePlans should be setup exclusive of tax as this is how the data is received from Mews. Decisions will be sent exclusive of taxes. Tax handling is managed by Mews.

Important – When setting up Restrictions in IDeaS, the Short name is the RateCode and unique identifier between Mews and IDeaS. This is what should be used.

Reference: Create a rate in Mews

<https://help.mews.com/s/article/create-a-rate>

Segment Setup

Important – IDeaS requires market segment data to process reservations and group transactions. Read more below about how to set up segments and automatically apply them to reservations in MewsReference:

Create, modify, or delete a segment

<https://help.mews.com/s/article/create-modify-or-delete-asegment?>

[language=en_US](https://help.mews.com/s/article/create-modify-or-delete-asegment?language=en_US)

Automatically apply certain segments by default

<https://help.mews.com/s/article/adjust-your-segment-settings?>

[language=en_US#link2](https://help.mews.com/s/article/adjust-your-segment-settings?language=en_US#link2)

Require all reservations to have a segment

<https://help.mews.com/s/article/set-up-a-bookable-service?>

[language=en_US&Language=en_US#Link1b](https://help.mews.com/s/article/set-up-a-bookable-service?language=en_US&Language=en_US#Link1b)

Multiple Priced Products

These are the additional rates separately setup from your Primary Priced Product. These rates cannot be derived or based upon your primary selling product. Mews does not allow for decision recommendations to these rates if the setup is based on your primary selling product. These should be there own base rates.

It is important to understand that in the same manner as your primary priced rate, IDeaS is only able to price either the 1 or 2 Adult value. The configuration created within Mews PMS for the offset calculation will then manage the value on the price that IDeaS is not able to price.

Please reach out to your IDeaS contact to discuss.

Mews Marketplace Subscription

The IDeaS Marketplace subscription must be concluded prior to data capture with IDeaS RMS. This is the responsibility of the client.

Marketplace -> search for "IDeaS" in the search bar > click "Explore" > Click "Connect integration"

Reference: Connect and disconnect integrations in Mews

<https://help.mews.com/s/article/connect-and-disconnect-integrations>

Once the integration connection has been added to your Marketplace subscriptions, an email will automatically be sent to IDeaS Installation Team with your integration's access token.

If you need to find the Access Token manually, please follow this help guide:

<https://help.mews.com/s/article/find-an-integration-s-access-token>

IMPORTANT: Once this has been done, please reach out to your IDeaS Account Representative for next steps.

Additional information required

- Services to skip in case of non-bookable services (employee rooms for example)
- Space categories to skip (special employee-only space categories for example)
- What is your agreed past and future days data requirement? Typically, this is a minimum of 365 days past and 365 days future at a minimum. In some cases, following discussions with your IDeaS contact you may be advised to capture your data as a limited data build. The process may also vary if you are already an IDeaS client and migrating from a different PMS system.
- Sync start date – this would be the first date that your hotel started working with Mews or the first reservation in-house with Mews PMS.
- Please advise your IDeaS Account Manager if you will be activating component rooms as this is currently under development and not supported.

Important Notes

- Should you be planning to make changes to your Market Segmentation and Room Type, please reach out to your IDeaS Account Manager for guidance. Room types, Market Segments and Rate Codes should not be deleted as this will impact the integration and alignment of systems.

Validating Decision Upload

- DailyBar
- Minimum Length of Stay
- Multiple Priced Product Rates (limited, discuss with IDeaS contact)

For required Multiple Priced Products Decision updates, these rates cannot be derived from your primary selling product in Mews. These have to be their own base rates. To verify that the pricing for a rate/category/date combination has been uploaded into Mews, navigate to the rate management screen in Mews.

From the burger menu, go to Settings > Services > click on the Bookable service that IDeaS is revenue managing (typically called “Stay”) > Click on any Rate > click on the Pricing tab to reach the rate management screen.

Reference: Rate management in Mews

https://help.mews.com/s/article/rate-management?language=en_US

Additionally, you can also use the Action Log in Mews to view all price adjustments and the user account or the integration that has actioned the change.

<https://help.mews.com/s/article/action-log>

FAQ's

Problem: Business Day End has processed and the Summary Statistics files triggered have returned an error –

The Past and Future Room Type Market Segment reports are rejected in IDeaS due

to “Collection StatisticApplicationSetType is empty”.

Resolution: This is because there are no reservations in-house when the Business Day End was completed. At least one reservation transaction with a rate value greater than 0.00 needs to be in-house for the first Business Day End Summary Statistics to process in IDeaS. Create a “dummy reservation” with a rate value greater than 0.00 and check the transaction in. This should remain in-house until such time you have reservations in-house.

Problem: Business Day End processed and IDeaS reports that Summary Statistics are failing due Past and Current Room Type Market Segment error “Insufficient Market SegmentStatCode counts present”

Resolution: “Classification” is missing from the Accounting categories/Rooms Setup for one or more rooms. Reach out to Mews for assistance.

Problem: Following Business Day End, Summary Statistics in IDeaS are failing due to “Duplicate Entries in the Report” for both Current and Past Room Type Statistics

Resolution: Space Categories in Mews have not been setup correctly. Space Categories are used to map the Mews room types to the IDeaS Room Types. Reach out to Mews for assistance.

Problem: IDeaS RMS is sending decisions, but these are failing due to Rate or Room Type Error:Invalid Room Type Code

Resolution: Shortname Language Setup in Mews configuration does not match Shortname detail for Rate or Room Type Shortname. Rectify the Mews Configuration

Problem: Multiple Priced Products Decision is failing Error:Can't update rate XXX because of base rate attached

Resolution: Mews does not support Linked Product updates to rates derived or based upon your primary selling product. These rates must be setup as there own independent rates with their own Base.

Problem: Summary Statistics are not populating due to no guests in house

Resolution: In order for IDeaS to accept Summary reporting there has to be at least one reservation in-house. A dummy reservation can be created with a low rate value with status “Checked-In” until such time that reservations are actively staying in the hotel again

Problem: I have received a message from CARE saying they have not received my properties BDE/IDP Summary Statistics

Resolution: Please reach out to support@omniboost.io is you are confident the night audit had been run.

Another cause could be the expected timing of the reported being sent. In this even please reach out to your IDeaS Customer Relationship Manager.

Problem: Reservations are being rejected due to “Collection RateType.Rate is empty.”

Resolution: This means that we are not receiving a ratecode/ratevalue from Mews->IDeaS. This could be caused by your accounting categories not being setup for your primary Stay Service. Please

review and correct. A resync of data will be required in this event

Handling Data Discrepancies

Rooms Sold Dcrepancies

Is some events you may find that what you are seeing in Mews as sold is different to what is in G3. In order to compare the data it is recommended that you refer to the following reports

IdeaS G2 – Navigate to Monitor Performance->Reports->Data Extraction Report and select Start and End Date, with Element “Rooms Sold” by Hotel, MarketSegment Groups and Market Segment selected. Export to Excel

IdeaS G3 – Navigate to the Dashboard->Business Insights. Select the start and end date by value Occupancy on the Books->Generate

Mews – Availability & Occupancy Report

Select Date for further information

Reservation Report – Report in Mews that shows occupancy in-house for the stay date. (Does not include Cancelled, No-Shows and Enquired reservations)

If rooms are picked-up as a reservation from allocated inventory on a group block these will be present in the reservation count. If rooms are not picked-up they will not be present.

Enquired – Does not deduct Rooms from Capacity

Revenue Discrepancies

Reports – Accounting Report

The Net figure includes all packages, but excludes taxes. Consideration should always be given to potential city taxes setup.

IDeaS only receives the net room revenue, therefore meaning this excludes any products and taxes associated with the rate value.

Best Practice for setup or Rates and associated products.

Support

Please reach out to Care or your Customer Relationship Manager at IDeaS should you require support relating to IDeaS RMS.
