MGM Rollout – OPERA Agent

Below are some steps need to be followed for MGM property roll-outs.

G3: Side

1. Add Property on G3 side (Mostly the property code is same as resort code)
2. Set below parameters for 1st/History Data Pull
 1. [pacman.integration.opera.pastDays]=730
 2. [pacman.integration.opera.groupPastDays]=730
 3. [pacman.integration.futureDays]=730
 4. [pacman.integration.opera.populationChunkSize]=60
3. Each property of MGM will have its own agent. (The topology/type set at agent level, so no change required)
4. History is pulled from Build DB.
5. Once History feed is pulled set below parameters before daily pull
 1. [pacman.integration.opera.pastDays]=45
 2. [pacman.integration.opera.groupPastDays]=560
 3. [pacman.integration.futureDays]=730
 4. [pacman.integration.opera.populationChunkSize]= 180 (Default value)
 5. [pacman.integration.timeToCheckAuditDate] : set appropriate as suggested hhmm by MGM

Agent: Side

1. Install agent on D:\IDeaSAgent drive of the VM.
2. On each VM we are going to have 5 agents.
3. Ports used per each agent: 443, 1443, 2443 and 3443

Note: Sometimes MGM need the timings around Data Feed creation. You can get the data from Job but if you want detail data of how much time taken in Temp Table population and data transfer to G3 then use CMT query to get stats.
[Opera_Performance_Monitor by correlation ID]: Use correlation id as a parameter.
