OHIP Emulator Workflow

NOTE: OHIP Emulator based properties ALWAYS get Summary stats data and we get it from an Agent. Therefore, DO NOT Send “Summary Stats not received” notification to the client

(<https://workflowy.com/#/6c2bb7236df4>)

OHIP Emulator Workflow

- Check Business Date
 - [ohip-emulator-internal.ideasrms.com/api/v1/operaMetaData/<ChainCode>/<Property Code>] (<https://ohip-emulator-internal.ideasrms.com/api/v1/operaMetaData/HYATT/FRAJR>)
 - is the Date rolled over?
 - Yes
 - If date is rolled over, Check When was the date rolled over (We check this to understand how much time has passed after the G3 system received the updated date – it will help establish that the communication between the G3 and PMS is working overall)
 - To check it, access the Summary statistics rest call of the property for toady’s date and you can see that an ID is created as shown in the screen shot below with the status ‘Ready for pulling’.
- copy that ID and search it in DataDog.

- You can then correlate the time in datadog with the current time to understand if the message was recently received or it was sent long time ago (in the above screenshot, you can see that the message was received just 2 mins ago [I have DD time set to CST])
- If the time between the message received and current time is more than 1 hour, then that is an alarm that there is some issue.
- If all goes well, then within 15-20 mins, the next task of pulling the data will be initiated.

- Once the ID is created, you will need to monitor if all the stats are getting created (6 Of 6)
- Check the remote tasks if the tasks are getting executed
- to check the remote task –

- [<https://ohip-emulator-internal.ideasrms.com/api/v1/propertyTask/<ChainCode>/<Property Code>?size=12&page=0>](<https://ohip-emulator-internal.ideasrms.com/api/v1/propertyTask/HYATT/LBCJB?size=12&page=0>)
- Eg: <https://ohip-emulator-internal.ideasrms.com/api/v1/propertyTask/HYATT/LBCJB?size=12&page=0>

- IF the status of the task is "Pending" and for a long time (more than 30 mins) then you need to check if the communication between the Emulator and Agent. ([Agent and Emulator] (<https://workflowy.com/#/3f2bcf2d84ec>))

- is the Date rolled over?
- No
 - There could be multiple reasons for date not being rolled over
 - Communication Issue in OHIP

- Communication issue between
 - Agent and Emulator

-

- Check if the agent heartbeat is receiving or not.
- to check the heartbeat go the the URL -
[<https://ngi.agent.admin.ideasrms.com/installation>]
(<https://ngi.agent.admin.ideasrms.com/installation>)
- to identify the Agent of our impacted property
- Click on Properties

-

- Let the page load. Once it is loaded, click on the filter.

-

- Click on the funnel icon and type in your property code

-

- Do not Click Apply. Just hit Enter
- Now you will see the Agent ID and property ID

-

- Now go to Opera Agent tab

-

- The agent with Grey heart is not communicating.
- If that is the case, then identify where the machine is located.
- If Hyatt DC -We have access to Hyatt Grid
- If Oracle DC – Ask the client to open a ticket with Oracle
- If standalone Machine – Send Still Alive messages
- You can see that the agent with Red heart is actively communicating
- In this case the communication from IDEaS to Agent is working fine.
- Add logs and check them to see if Communication between the Agent and

PMS is working fine

- IF the status of the task is “Pending” and for a long time (more than 30 mins) then you need to check if the communication between the Emulator and Agent.

([Agent and Emulator](<https://workflowy.com/#/3f2bcf2d84ec>))

- Agent and PMS

-

- From the downloaded logs, check If the agent is able to communicate to PMS
As shown in the example below

- The above indicate that the Agent is not able to communicate to the PMS to query for Data and Business date.

- In this scenario, contact the client to have the credentials validated.
- Property Did not complete the Night Audit
- In this case, add the logs to check what business date is returned
- If it is not the latest and the time printed in the logs is Realtime, then the client has not completed the Night audit.
