1 Introduction

1.1 Purpose

The purpose of this document is to prepare a standard process for Opera Agent-to-Opera Cloud migrations using NGI Agent so that we can have timely migration of the projects and identify the different tasks performed in the migration.

1.2 Scope

This document will explain the step-by-step execution migration process for Opera Agent to Opera Cloud using NGI Agent.

1.3 Intended Audience

The target audience for this document is the entire team members working on Opera Agent-to-Opera Cloud migrations using NGI Agent

1.4 Abbreviation

Abbreviation	Description
ICS	Installation Configuration Settings
FDS	Foundation Service
OHIP	Oracle Hospitality Integration Platform
NGI	Next Generation Integration
PMS	Property Management System
RMS	Revenue Management System
ORS	Online Reservation System
OTA	Online Travel Agent

2 Entry Criteria

- Project is at Execution Stage

3 Pre-Requisites & Assumptions

It is assumed that the ICS team has the access to the following tools & has the required knowledge to use the tools and execute the project

- G3 RMS
- [FDS](#)
- [booking.com](#)
- [Expedia](#)

4 Things to Remember

- Go to G3 -> Get all the details of property (Property Code, Client Code, External System, Time Zone, System Mode)

Note – The property should either be in Decision Creation or Decision Delivery Mode.

5 Activities Performed

Task 1 – Check if the property is available on FDS

- The user will go to the following page – <https://fds-admin.ideasrms.com>
- Flow 1 – Search by PMS ID

Ranjit on [Service Recovery Procedure – IDeaSOperaAgent Service in “Stopping” State](#)

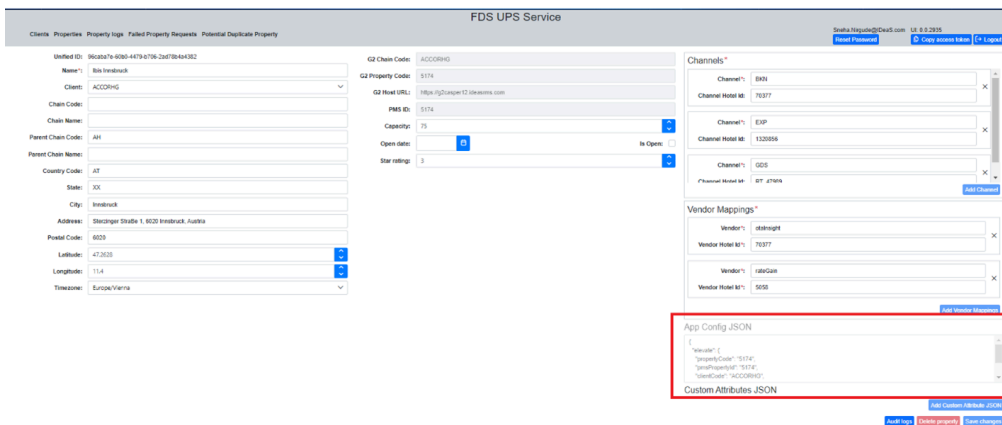

Ranjit on [Processing Failures Due to Data Type Mismatch for MGM Resorts](#)

Ranjit on [Accor Client Handling Process Guide](#)

- On this page go to Search by other ID -> PMS ID - Enter the PMS Id and click on search.

- This will redirect to the following page wherein you can check the App Config JSON -> Check if this config is done for G3

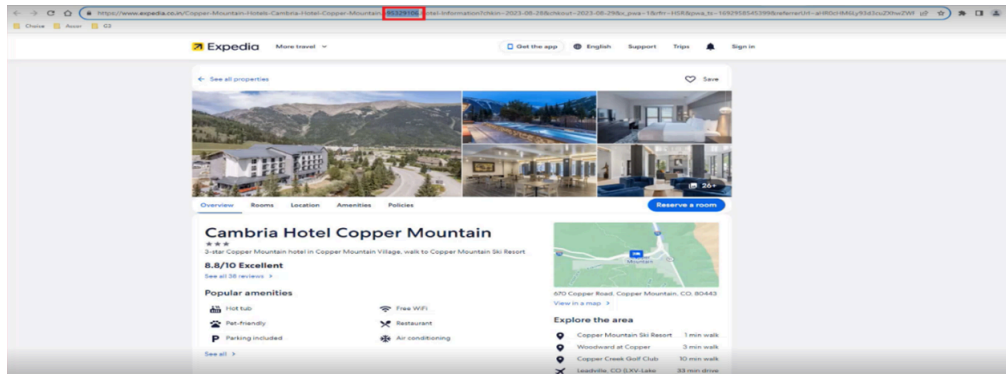

- Once the configuration for G3 is available in App Config JSON then you can proceed with adding the property in G3.

- If the configuration for G3 is not available in App Config JSON, request the technology team to add the same. (Currently Sandeep Gund, Abhishek Kunden or Soumitra Inamdar)

Flow 2 – Search by OTA ID (Booking.com & Expedia)

- Go to different OTA platforms like Booking.com, Expedia etc.
- Fetch the ID from the URL as shown below

- Use this ID to search the property in FDS
- On this page go to Search by other ID –> Channel ID – Enter the Channel Name and click on search.

- This will redirect to the following page wherein you can check the App Config JSON -> Check if this config is done for G3

- Once the configuration for G3 is available in App Config JSON then you can proceed with adding the property in G3.
- If the configuration for G3 is not available in App Config JSON, request the technology team to add the same. (Currently Sandeep Gund, Abhishek Kunden or Soumitra Inamdar)

Task 2 – Property Not Available on FDS

- If the property is not available on the FDS then request the rate vendor to push the property on IdeaS FDS.
- For the same open an internal case in SFDC à Subject “IdeaS – FDS -rateGain-UPS Property Sync” à Update the required details à Come to More section as

shown in below screenshot à Click on “Share with rate Gain”à Add your comment in the comment section à Add your comment as below

Hello Team,

Kindly sync the following properties to our UPS system:

Name: Hotel Name

Address: Hotel address from Google

EXP ID: Expedia ID

BKN ID: Booking.com ID

Regards,

- Once you save this comment you will receive an automated acknowledgment response from “qm-hospi@retegain.com”
- In the case the “contact Name” should be your own name.
- The case raised to the Rate Gian should usually be resolved within 2-3 working days.
- If not resolved within the given time co-ordinate with the Technology team members, share the ticket number received in acknowledgment e-mail with them and the concerns that are faced related to the same. (Currently Sandeep Gund, Abhishek Kunden or Soumitra Inamdar)
- These concerns are taken care in a weekly meet with Rate Gain where the unsolved tickets are discussed and solved.

Task 3 – Confirm Property on FDS

- Once the property is pushed into FDS then check the App Config JSON for G3 as shown in Task 1 or 2.
- If it's not updated co-ordinate with the tech team members with below details. (Currently Sandeep Gund, Abhishek Kunden or Soumitra Inamdar)

1. UPS ID

2. Property Name
3. Client Code
4. Property Code
5. G3 Prod URL

Example –

Property Name: TRIBE Budapest Stadium

UPS ID: 69beb71f-4dae-44fb-9e25-95143664a194

Client code: ACCORHG

Property code: B875

Prod URL: <https://g3rms.ideas.com/>

Task 4 – Check & Add Client on NGI Admin Page

- Once the above steps are completed come to the NGI page
<https://ngi.agent.admin.ideasrms.com/installation>
- On this page we'll check if the client is available on the NGI

- If the client is Not Available add the client to NGI.Go to Actions à Add Client
- The following details will be required

1. Client Code
2. Client Name
3. OPMS Installation Type
4. ORS Installation Type

Task 5

–

Check & Add

Agent in NGI Admin Page

- To check the Agent go to <https://ngi.agent.admin.ideasrms.com/installation> -> Opera Agent tab
- The agent can be searched using the CX number received from the client. This number will then be shared on the slack channel with the Oracle team and we will receive a URL from the Oracle team.

The grey highlighted area is the machine name.

- We'll search the agent with the Machine Name or search using the 1st 4 or 5 digit of the code

- Once the search is completed on all the pages and the required agent is not available then add the agent.
- Go To Actions -> Click on Add Agent

- Once the Agent Id is identified then this ID can be utilized while adding the property.

Task 6 – Add Property in NGI Admin Page

- Once the Client and the Agent details are verified on NGI then check if the property is available on NGI.
- The property should not be available on NGI.
- To add new property to NGI go to Actions -> Create Property à Fill in all the necessary details and click on 'Create'

Task 7 – Add Client in NGI Integration Page

- Now we'll add the client to NGI Integration Page.
- The following details are required.

1. Integration Type
2. Vendor ID
3. Client Code
4. Analytics Engine

Task 8 – Add Property in NGI Integration Page

- Once the client is successfully added, we will now add the property to NGI Integration Page.
- The following details are required.

1. Integration Type
2. Vendor ID
3. Client Code
4. Property Code

- Once the property is added there are a few parameters that are required to be updated.
- For the same click on the Cloud Icon against the required property.

- This will redirect you to a new tab wherein you need to enable the “Non-Empty” toggle button to enable the changes in the parameter at property level.

Task 9 – Perform Test Connection

- Once the property is added, the team has to send a message on Slack to perform the test connection, if the connection is successfully established then the following screenshot will be received and on the NGI page we can see a red heart.

Task 9 – Pull Business Date

- Once the connection is successfully established, then we'll pull the business date using the swagger – <https://ohip-internal.ideasrms.com/swagger-ui/index.html#/DiscoveryInboundService/getBusinessDate>
 - Enter the Client Code –>Property Code–>Click on Execute
-
- Once you click on 'Execute' in the Response Body section you will receive the business date. This business date should always be your 'current date'. This shows that your property is up-to-date
-
- Once you confirm that the property is up-to date then we will pull the 1st extract after the migration.
-
- Click on the downward arrow–> Fill in all the details–> Click on Execute. The 1st extract should begin.

Task 10 – Monitor Extraction in PMS Inbound

- [NGI \(PMS Inbound\)](#)

E.g. – <https://pmsinbound-internal.ideasrms.com/nucleusStatisticsCorrelations/criteria?search=clientCode==LASUITE;propertyCode==HLSK&sort=lastModifiedDate,DESC>

Update the Client Code & Property Code as per needed.

- Once you see the status as “Sent for Processing”, it means that the extract is created.

Task 11 – Verify Extracts in AWS

Note – If you are not the authorized individual to access the AWS kindly communicate with your team lead or team manager to discuss the issue and get the same resolved.

- Login to AWS –>The Logs will be downloaded & available in S3 bucket on the [Amazon S3](#) page

Go to Amazon S3 –> Click on Buckets –> Click on NGI Agent Prod

- Click on agent-inbound-raw-data/

- Enter the Client Code

- Click on the Required

Property

- Click on the required Year

- Click on required Month

- Click on required Date

- Once you click on the required date, all the extracts that are pulled will be available here. You need to check the latest extract that you need from the correlation id.

Note – You will get the correlation id from the PMS Inbound page.

- All your necessary files will be available on the extract that you click.
- Click on the necessary files that you want to download -> Files will be downloaded in .txt formatà Drag and drop this file in an excel file-> Convert text to column.

- Once this data is verified and as per requirement then go to G3-> Configurations-> Property -> Enter Client Name -> Property Code-> Set the parameters

pacman.feature.pmsInboundBaseUrl- <https://pmsinbound-internal.ideasrms.com>

pacman.feature.enableMultipleNGIConfigurations- Ture

pacman.integration.suspendBdeAndCdp- False

- Once these parameters are set the extract will now be available in Data Loads.
- Once this is done the property will be set in CatchUp mode.
- Once the property is put in catch up mode inform the client to verify forecast. After client confirmation the property has to be put in decision uplaod mode.
- For same we need to do some configuration in the NGI Integration Page -> Add Client -> Add Property -> Set the parameters at property level.

- Once the parameters are

set go to G3 ->Property Outbound ->Take the back up of Opera and then Add Outbound->OCP

- After adding the OCP do the required configurations

- Once these configurations are done, if the property is to be set to Decision Delivery then go to G3-> Configurations -> feature.decisionDeliveryBaseUrl -> Paste the URL <https://decision-delivery-internal.ideasrms.com/>

- Come to Edit Property Data -> Set the Property to Decision Delivery

6 Exit Criteria

- The required configurations are done for NGI Agent.
