Approved By	Sr Associate Technical Support Engineer	Name	Sonu Yadav

1 Introduction

1.1 Description

ORS:

- Opera Reservation System (ORS) is a comprehensive Central Reservation System (CRS) developed by Oracle. It facilitates the management of reservation data and enables the distribution of booking information across various channels.
- ORS acts as a middleware, connecting property management systems (PMS) like Opera (OPMS) and external distribution systems.

1.2 Purpose

The purpose of this document is to prepare a standard process for ORS/OPMS for OHIP Emulator migrations to ensure the timely migration of the projects and identify the different tasks performed in the migration. This document will give a clear picture of the different steps and tasks performed in the ORS/OPMS for OHIP Emulator migration.

- This document outlines the process for installing and configuring ORS (Opera Reservation System) and OPMS (Opera Property Management System) for use with the OHIP Emulator.
- The process is designed for properties onboarded via NGI (New Generation Interface), with a specific focus on the integration of Opera and ORS, as well as the required configuration steps.

1.3 Scope

This document will help in identifying the different steps involved in the migration of properties from ORS/OPMS for OHIP Emulator and the different teams involved in the process of migration

1.4 Intended Audience

The target audience for this document is the team and the stakeholders involved in ORS/OPMS for OHIP Emulator migration projects.

E.g. – Project Manager, Project Lead, Team Members etc.

1.5 Abbreviation

Abbreviation	Description
ICS	Installation, Configuration & Support
ORS	Opera Reservation System
CRS	Central Reservation System
PMS	Property Management System
NGI	Next Generation Integration
OCP	Opera Central Platform
OHD	Opera Hotel Data

1.6 Pre-Requisites & Assumptions

- It is assumed that the project team has the access to the following tools & has the required knowledge to use the tools and execute the project

2 Process

2.1 Historic Process overview

The previous process for configuring and installing ORS/OPMS followed a simpler approach. The key steps in the old configuration were:

Step 1: Install Agent and Configure Mapping

- A remote agent was installed, and mapping configurations were created to enable decision uploads to both Opera and ORS.

Step 2: External System Setup

- Opera (OPMS) was configured as the external system, and the system communicated with both Opera and ORS, typically with separate agents for each.

Step 3: Single Agent Setup

- It was not mandatory to install separate agents for Opera and ORS. A single agent could handle decision uploads for both systems.

2.2 Key Changes in Process

NGI Onboarding:

- 1) All new properties must be onboarded via NGI, even if the property uses Opera (OPMS).
 - 2) OCP Replaces Opera: Opera is now replaced with OCP (Opera Central Platform) for compatibility with NGI
- With the introduction of NGI (New Generation Integration), significant changes have been implemented to streamline the process and ensure compatibility with the OHIP Emulator. The updated process includes the following steps:
 - Onboarding New Properties via NGI:
 - ✚ As part of the updated process, all new properties, even those using Opera, must be onboarded via NGI /OHIP
 - ✚ Properties must be added to NGI, which serves as the gateway for both decision uploads and system communications

The screenshot displays the IDEAS G3 RMS interface for property management. The top navigation bar includes links for Property, Client, Opera Agent, IDG Agent, PMS Migration, MS Recoding, Hilton CP Migration, Agile Product Import, Agile Product Shelf, Shelf State Transition, and Hilton IPP Migration. The 'Property Summary' section provides an overview of the property's status, including Client Code (AMANINT), Property Code (0024), Property Name (Aman Nai Lert Bangkok), and Property ID (995896). The 'External System' is set to NGI / OHIP. The 'Edit Property Data' section allows for configuring various settings, such as System Mode (Decision Creator), Connectivity Location (Micros US Oracle), and Transport Mechanism Type (OHIP Emulator). The 'Property Ready for External User' status is indicated as 'ON'.

2.3 Configuration Changes

- Several key configuration changes have been introduced:
- Replacement of Opera with OCP:
 - 1) OCP (Opera Central Platform) now replaces Opera (OPMS) as the external system.
- Triggering of Jobs: Previously, adding properties as Opera would trigger jobs related to the Opera system. Now, if a property is added as an OHIP property, jobs related to Opera will not be triggered. Only NGI-specific jobs will be executed.

Property Client Opera Agent IDG Agent PMS Migration MS Recoding Hilton CP Migration Agile Product Import Agile Product Shelf Shelf State Transition Hilton IPP Migration			
▼ Property Summary			
Client Code : AMANINT	System Mode : Decision Creation Mode	Agent IDs :	Processed Function Space Activity Count : 0

Property Name : Aman Nai Lert Bangkok	Property Timezone : Asia/Bangkok	Processed BDE Activity Count : 50	Processed Web Rate Extracts : 2
Property ID : 995896	Agent : N/A	Processed CDP Activity Count : 0	Scheduled CDPs : none
External System : NGI / OHIP	Country Code : TH	Latitude : 13.7471	Longitude : 100.544
Back To All Properties			
Edit Property Data Excluded Dates Decision Configuration Data Loads Process Data Automation Manager Core Settings Inbound Integration Questionnaire Outbound Special Care Sync Flag Tool			
Destination	Delivery Type	Upload Type	
OCPs	Daily BAR	Differential	
OCPs	Hotel overbooking	Differential	
OCPs	LRV At Room Class	Full	
OCPs	Room type overbooking	Differential	
OHD	Daily BAR	Differential	
OHD	Hotel overbooking	Differential	
OHD	LRV At Room Class	Full	
OHD	Room type overbooking	Differential	
SynXis - 46119 - DAILYBAR	Daily BAR	Differential	
SynXis - 46119 - DAILYBAR	LRV by room type	Full	

NOTE- OCP is a just replacement of opera

2.4 ORS Configuration via OHD:

- OHD (Opera Hotel Data) is now configured as the external system for ORS communication. This streamlines decision uploads and simplifies the system setup.

2.5 Agent ID Configuration

- In the new process, the need to manually map Agent IDs for both Opera and ORS has been eliminated. The steps are now handled automatically through NGI.
- Earlier Process: Agent IDs were manually mapped for both Opera and ORS.
- New Process: Agent IDs are not mapped individually. The ICS team will add the property to the NGI Agent.

The screenshot shows the IDEAS G3 RMS interface. The top navigation bar includes 'Property', 'Client', 'Opera Agent', 'IDG Agent', 'PMS Migration', 'MS Recoding', 'Hilton CP Migration', 'Agile Product Import', 'Agile Product Shelf', 'Shelf State Transition', and 'Hilton IPP Migration'. The 'Property Summary' section displays various property details, with 'Agent IDs' highlighted by a red box. Below this, the 'Decision Configuration' tab is active, showing a table with columns: Destination, Delivery Type, and Upload Type.

Destination	Delivery Type	Upload Type
OCPs	Daily BAR	Differential
OCPs	Hotel overbooking	Differential
OCPs	LRV At Room Class	Full
OCPs	Room type overbooking	Differential
OHD	Daily BAR	Differential
OHD	Hotel overbooking	Differential
OHD	LRV At Room Class	Full
OHD	Room type overbooking	Differential
SynXis - 46119 - DAILYBAR	Daily BAR	Differential
SynXis - 46119 - DAILYBAR	LRV by room type	Full

NOTE- Due to the process change, Agent ID is mapped through NGI Directly

2.6 Connectivity Request and Installation Process

- The process for connecting properties and configuring ORS/OPMS is now as follows:
- Property Addition to NGI Agent:
- The property is first added to the NGI Agent
- ICS Team does not have access to add same property to the different agent, it is done through the QA Team
- Request Client Connectivity:
- Once the property is added, the next step is to contact the client and request the necessary connectivity details.
- Installation Using Agent ID:
- After receiving the connectivity details, the property is installed using the appropriate Agent ID.
- Establishing ORS Connection:
- Once the installation is complete, the ORS connection is established.

The screenshot shows the 'Installation' page with a navigation bar at the top containing 'Installation', 'Dashboard', 'Job Monitoring', and 'Configuration'. Below the navigation bar, the 'Installation' section is active. A sub-section 'Agent Property Mappings' is selected, showing a table with the following data:

Agent Id	Agent Property Id	Vendor Id	Client Code	Property Code	Ups Id
100141	10001536	OCP	AMANINT	0024	33a01940-b50c-4b64-90...
100471	10001536	OHD	AMANINT	0024	33a01940-b50c-4b64-90...

The first two rows of the table are highlighted with a red box. The page footer indicates '© 2022 IDEAS Revenue Management System'.

Note- While adding the property, the same property on the different agent is difficult, so ICS Team does not have access for it, it is done by QA Team

3 Exit Criteria

- Migration successfully completed. Completion of migration project informed to the respective stakeholders and the same is confirmed by client
- Deliverables are successfully delivered.
