1 Introduction

1.1 Purpose

The purpose of this document is to provide a standard process for Pre-Post Forecast and Decision verification to assess the similarity of Forecasts and Decisions at the following levels:

- Property

- [Forecast Group](#)
- [Room Class](#)
- [Room Type](#)
- [Market Segment](#)

This assessment will be used in the following scenarios:

- PMS Migration
- Recoding

1.2 Scope

This document is used as a tool in the [Forecast](#) and Decision verification which is a critical step will help in identifying anomalies in the forecasts and [decisions](#) to provide the 'go-ahead' for decision upload after recoding / PMS migration.

1.3 Intended Audience

The target audience for this document is the ROA/ ICS team and the stakeholders involved.

2 Entry Criteria

- Project is at Execution Stage

3 Pre-Requisites & Assumptions

- It is assumed that the ROA/ ICS team has the access to the following tools & has the required knowledge to use the tools and execute the project
- [G3 RMS](#)
- Excel
- [G3 CMA](#)

4 Activities Performed

Task 1 – Pre-Data Collection

- In this task the team should download the "Data Extraction report" for the last **2 years** (start date) & future

1 year (end date) before the migration

- This can be collected as follows
- Go to G3 [UI](#) (select the appropriate Prod) -> Select the Client-> Select the Property

Once the Client

and property are selected go to the Monitor section, Monitor -> Data Extraction.

Select the Data at the following levels: Property, Room Class, Room Type, Forecast Group & Market Segment as seen in the image below. Note – Uncheck the Same Time last year i.e., Occupancy on the books STLY, Occupancy on the books STL2Y, Revenue STLY, Revenue STL2Y for all and My Forecast if applicable.

- The Data Extraction report is received via e-mail.

- Create a sub folder in the main folder. Name the folder as Pre- Data_Property name_Date
- Save this report in the respective folder as Pre- Data Extraction.
- Once the report is received on your mail, follow the below steps.
- Download the file in Excel format. Save a copy of the **template** in the folder.
- Copy the following columns and paste them in the 'Property' sheet in the template.
- Property Name (Will remain same for Pre & Post)
- Day Of Week (Will remain same for Pre & Post)
- Occupancy Date (Will remain same for Pre & Post)
- Occupancy On the Books This Year
- Forecasted Room Revenue This Year
- Occupancy Forecast-Total This Year
- System Total Demand Total This Year
- User Total Demand This Year
- Overbooking This Year
- Last Room Value This Year
- BAR

Note – Update the column headers with the prefix “Pre” followed by the column name (e.g. -Pre_BAR) In the BAR column delete all the ‘No BAR’ and convert the other field in the same column to number

- Copy the following columns and paste them in the 'Room Class' sheet in the template.
- Property Name (Will remain same for Pre & Post)
- Day Of Week (Will remain same for Pre & Post)
- Occupancy Date (Will remain same for Pre & Post)
- Occupancy On the Books This Year
- Last Room Value This Year
- Forecasted Room Revenue This Year
- Occupancy Forecast-Total This Year
- System Total Demand Total This Year
- User Demand This Year

Note – Update the column name with Prefix 'Pre' followed by the column name (e.g.- Pre_Last Room Value This Year)

- Copy the following columns and paste in the 'Forecast Group' sheet in the template
- Property Name (Will remain same for Pre & Post)
- Day Of Week (Will remain same for Pre & Post)
- Occupancy Date (Will remain same for Pre & Post)
- Occupancy On the Books This Year
- Forecasted Room Revenue This Year

- Occupancy Forecast This Year
- User Demand This Year

Note – Update the column name with Prefix ‘Pre’ followed by the column name (e.g.-
Pre_Occupancy Forecast This Year)

- Copy the following columns and paste in the ‘Room Type’ sheet in the template
- Property Name (**Will remain same for Pre & Post**)
- Day Of Week (**Will remain same for Pre & Post**)
- Occupancy Date (**Will remain same for Pre & Post**)
- Overbooking This Year
- BAR

- Copy the following columns and paste in the 'Market Segments' sheet in the template
- Property Name (**Will remain same for Pre & Post**)
- Day Of Week (**Will remain same for Pre & Post**)
- Occupancy Date (**Will remain same for Pre & Post**)
- Occupancy On the Books This Year

- Collect the Forecast Investigator graph
- Go to Monitor -> Investigator -> Select 'Forecast' from dropdown. Use Snipping tool and save this image.

- From G3 CMA – Collect a dump of ‘solds’ & ‘reservations’ using the query – ‘G3 Data Review’
- Click on the Run SQL tab → Enter the query name in the Search box → Click Fetch.
- This will open a screen as shown below.
- Under Prod Instances deselect the prods which are not required. Retain the prod where the property exists. Refer to the screenshots below.
- Select the chain from the dropdown.
- Select the property. If you know the first few letters of the property, type them.

Task 2 – Post Data Collection

- In this task collect the data similar to the Pre Data detailed above for the same date range after the activity is completed, prior to Decision upload. For the same follow steps mentioned in Task 1

Note – Update the column name with prefix ‘Post’ followed by the column name (e.g.-
Post_Occupancy Forecast This Year)

In the BAR column remove all the 'No BAR' and convert the other field in the same column to number

- From G3 CMA – Collect a dump using the query – G3 Data Review by clicking on the Run SQL tab as explained above.
- Carry out a pre and post comparison of the data from CMA. Refer to the sample file.

Task 3 – Plotting the Graphs

- Once the data is ready the graphs can be plotted by selecting the columns from the appropriate sheet
- Select the appropriate columns and use F11 key to plot the graph. (**Line Graph should be used**) or you can also use the Insert option on the excel file.

- After the graphs are plotted, ensure that they are named appropriately.
- Analyze each graph to ensure zero or minimal variance between pre and post data.
- In case of doubt, consult your lead or manager.
- If there are no discrepancies, then it is assumed to be a go ahead for decision upload.

Note – If the variance is more than +/- 10% then it is assumed to be an alarming situation that needs to be flagged. This would need investigation by the ROA team.

Chart names	Level
<u>Capacity</u> , Out of Order rooms, <u>Remaining Capacity</u>	Property, RC, RT
LRV	Property, RC
Occupancy <u>On books</u> This year	Property, Market Segment
<u>Overbooking</u>	Property, RT
<u>Occupancy Forecast</u> This year, User Total <u>Demand</u> This year	Property, FG, RC

BAR	Property, RT
Forecasted <u>Room Revenue</u>	Property, <u>Room Class</u>

5 Exit Criteria

- Pre & post data comparison is successfully done.
- Decisions are successfully Uploaded.
