Process Document: Resolving Commit Forecast Group Job Failure (Particular Failure)

Overview:

This document outlines the process to resolve the common failure encountered in the Commit Forecast Group job across all prods. The failure typically occurs due to issues related to the Product_Family_ID not being created when loading the Forecast_Group table.

Example of Failure:

For illustration, the following details are provided for a failure encountered on Prod3:

- **Client Code:** ARGUPROP
- **Client Name:** ARGUS PROPERTIES
- **Property Code:** 0002
- **Property Name:** Hotel Eldorado

Reason:

The error occurs when the Product_Family_ID is not properly created during the loading of the Forecast_Group table.

Workaround to Resolve the Issue:

To resolve this issue, perform the following steps:

- HLTN/Handling Error for SAS Dataset Encoding Job

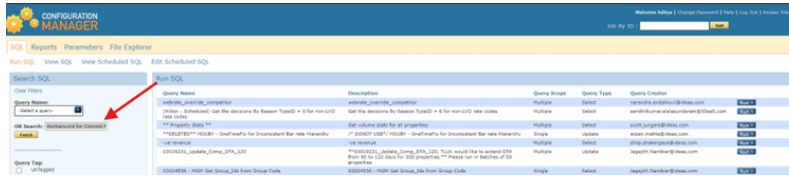

Steps to Follow:

1. Login to G3 CMA:

- Open the G3 CMA login page using the following link: <https://g3-cma.ideas.com/cma/auth/ssoLogin>

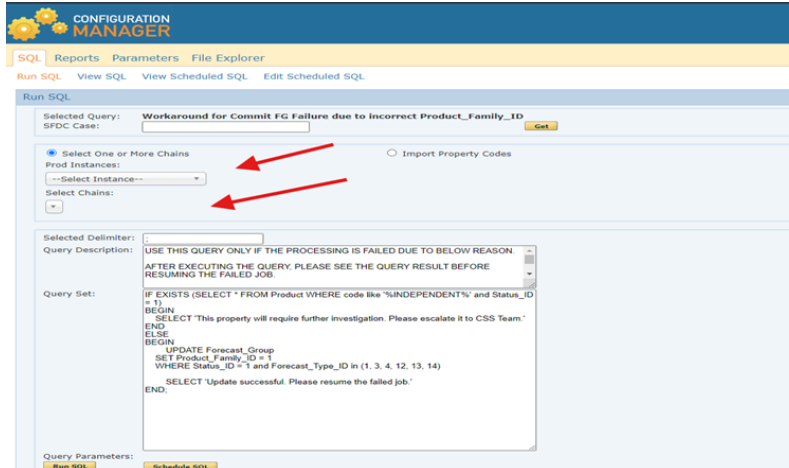

2. Search for the Query:

- In the G3 CMA dashboard, search for the term: **“Workaround for Commit FG Failure due to incorrect Product_Family_ID”**
- Click on the **Fetch** button to initiate the search.

3. Provide Specific Details: Once the search results appear, a window will open where you need to fill in the following details:

- Prod Instances:** Select the impacted production instance (e.g., Prod3).
- Select Chain:** Choose the chain associated with the impacted property.
- Select Property:** Choose the specific property for which the error occurred (e.g., Hotel Eldorado).

4. Run SQL Query:

- After selecting the necessary details, click the **Run SQL** button to execute the query.
- Wait for the status of the job ID to be completed.

5. Resume the Job:

- Once the job completes successfully, proceed to resume the **Commit Forecast Group** job that was previously failed.

Important Notes:

- This issue is related to the defect: [CRUSH-13545](#).
- The workaround should be performed until the defect is resolved.

Precautions:

- Carefully fill out all the details in the G3 CMA tool to ensure the correct execution of the workaround.
- Verify that the SQL query has been successfully executed before resuming the job.
