Process for Rollback, catchup and backfill (BVS) for G3 OXI properties

With latest enhancements in backfill workflows, the BVS process (as its referred in most of cases) is much more simple.

Please follow these steps:

1. In global parameters, set pacman.feature.useNewOperaSasLoad= true at property level. (NOTE: This step is temporary as this feature is not turned on globally yet. Once that gets turned on, we don't need this step)
2. Rollback the property
3. Catchup the property till latest available extract
4. Its possible that while the previous run of catchup is running, new extract is ready.
 1. In such cases, you may have to catchup that new extract\s as well.
5. These steps will take care of backfill as well as booked Room type data population in SAS.
