Process to enable STR data feed to IDeaS G3 RMS

Overview:

STR, formerly known as Smith Travel Research, is an American company based in Hendersonville, Tennessee, that tracks supply and demand data for multiple market sectors, including the global hotel industry. This document outlines steps that CARE must undertake to enable STR for a prospect client subscribing to these services. Below is a typical flow from a client perspective , and CARE completes the configuration on the G3 application side and this will outline that process.

Process:

Initiation of case work :

1. Client services team member or a PM enters a **SFDC Case for STR Configuration** with details as follows: **Installation:**
 1. Case Type: Installation
 2. Case Reason: G3 RMS STR Configuration

Notes:

- STR will provide the data in the hotel local currency. If a different currency is needed then the Case Owner **must** note that to STR. Before you commence configuring this property make sure you’re certain about the currency that the Hotel is subscribing to via STR.
- Case Owner must ensure Solution Profile is updated to show STR field is checked.
- This will trigger the STR Integration Configuration automated Workflow in SFDC.
- Typically STR responds with a reference number, and the PM inputs this reference into the case description. This reference number can be used to follow up if needed.

As a result of creating the Case five SFDC Tasks are created automatically as below;

- **Task 1:** Confirmation of STR Contract and Details and is completed by a PM/CRM.
- **Task 2a:** Send and Receive [Consent Form from Client](#)

- Once the STR CS team have confirmed the correct contracts are in place the IDEaS CS team must ensure the client has signed a Consent Form. This is needed from the client. It is needed from the client because the client owns the data. This is also completed by the IDEaS PM/CRM.

■ **Task 2b: Provide Consent Form to STR**

- IDEaS CS send the Consent Form to STR.

■ **Task 3: CARE Task – Prepare STR Mapping and Setup**

- CARE map STR Census Number to IDEaS Account Number via pacman.str.strAlias parameter.
- The STR Census Number is provided by STR once the consent form is received from IDEaS and the Project Manager attaches this to the Case.
- Care Should look for this information at the Case level and if not look at the Task Level. If not present assign a Task to concerned PM requesting for this information.
- CARE to activate STR parameter – pacman.feature.STREnabled.
To undertake this – one must go to the relevant G3 prod application (for ESA & GA prod 2).
Go to Support (1) > Go to the property tab (2) > select the correct client(Chain) and the correct property. (3) in the screenshot below.

Once completed – hit the edit button.

Then you must search a parameter by the name ‘pacman.str.strAlias ’ in the search field on the right hand side like below :

Parameter Name	Property	Client	Global	Since
pacman.str.strAlias	144215			12-Apr-2012

Fill in the STR Census Number in this field that was documneted in the Consent form attached by the PM.

You should now save the changes.

The next step is to enable the 2nd parameter.

Search a parameter by the name ‘pacman.feature.STREnabled ’ in the search field

Enable this parameter to True.

Save the changes again.

- **Task 4: CARE Task – Confirm STR Data Received**
 - CARE confirm the STR data received. All STR data comes in one file for all clients.
 - Below are the steps one must undertake to verify the receipt of STR feeds.

» CARE can also verify that the functionality is turned on being seeing the STR data in the following 2 locations:

- At a Glance Dashboard:

- Data Extraction Report

This completes the configuration and the verification of the STR setup for a G3 property.

Audit Points

1. Check the parameter value: `pacman.str.strAlias = 144215` ("This is a unique value for specific STR Vendor")
2. Check the parameter value: `pacman.feature.STREnabled` ' in the search field – Set to "True"
3. Check the At a Glance Dashboard: Check the below values

STR (This Year)

STR (Last Year)
