Processing Failures Due to Data Type Mismatch for MGM Resorts

Job Details

Job Name: Opera CDP Data Load
Step Name: operaTransactionStaySharesStep

Issue Description

During the execution of the operaTransactionStaySharesStep step for the MGM property on Prod3, the following error occurred:

java.lang.NumberFormatException: For input string: "2761957225"

This error occurs due to a data type mismatch in the Stage_Transaction table for the MGM property.
The invalid value causes parsing to fail, resulting in job failure.

Technical Explanation (Why the Error Occurs):

The method fetchAllTransactionsInBatch(List<Integer> resIdSubList) expects a list of Integer values, but it receives a list of BigInteger values from findReservationIdsWithUnwantedRoomSplit() due to the underlying SQL column being BIGINT. This type mismatch leads to a NumberFormatException at runtime.
A permanent fix is already in progress under defect **RAMAN-14733**

Resolution / Handling Approach

Note: Replace the Reservation_Name_ID with the value observed in your job failure

Use **G3 CMA** to identify mismatched values exceeding the integer limit using the saved query:

“Data Type Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures” – Export and review the output for reference.

Selected Query: Data Type Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures
SFD Case:

Select One or More Chains
Prod Instances:

PROD_3

Select Chains:

MGM Resorts Las Vegas

Select Specific Hotel
Select Property:

290 - Park MGM Las Vegas

Filter Hotels Based On Client Attributes 0 - Hotels found! Import Property Codes

Selected Delimiter:

Query Description: Data Type Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures

Query Set:

```
SELECT *
FROM opera Shares_AdjustedShareTransactions
WHERE Reservation_Name_ID=@reservation_id
SELECT *
FROM opera Shares_OnlySharedTrans
WHERE Reservation_Name_ID=@reservation_id
SELECT *
FROM opera Stage_Transaction_Change
WHERE Reservation_Name_ID=@reservation_id
```

Query Parameters: size = 1
reservation_id(Integer)

Run SQL Schedule SQL

ID = Input String From Failed Job

Chain Name	Shares_AdjustedShareTransactions_ID	confirmation_number	Reservation_Status	Is_Shared	shares	transaction_dt	ARRIVAL_DT

Apply workaround to delete the reservations from the affected tables using the saved query:

“DELETE Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures”

For Example-

The screenshot shows the 'Run SQL' interface in Salesforce. At the top, the 'Selected Query' is 'DELETE Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures'. Below this, there are options to 'Select One or More Chains' (selected) or 'Import Property Codes'. The 'Prod Instances' dropdown is set to '--Select Instance--'. The 'Selected Delimiter' is ':'. The 'Query Description' is 'Data Type Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures'. The 'Query Set' contains the following SQL code:

```
delete from opera.Sharers_AdjustedShareTransactions where
Reservation_Name_ID=@reservation_id
delete from opera.Sharers_OnlySharedTrans where Reservation_Name_ID=@reservation_id
delete from opera.Stage_Transaction_Change where
Reservation_Name_ID=@reservation_id
```

The 'Query Parameters' section shows 'size = 1' and 'reservation_id(Integer)' with a text input field. A red box highlights the input field, and a red arrow points to it with the text 'ID = Input String From Failed Job'. At the bottom, there are 'Run SQL' and 'Schedule SQL' buttons.

Output Example-

- Resume the failed job
- Monitor until the job completed successfully after cleanup.

Additional Notes

- Verify if there are a large number of entries returned in the saved query “**Data Type Mismatch on Reservation_Name_ID in Stage_Transaction for MGM Property causing failures**” for each table.
- If yes, call the escalation team and raise an escalation task for further analysis before applying the workaround.

Thank you Abhishek for documenting interim solution for this specific failure type.
