

Project Title: Brain

Date: July 2025

Purpose:

This document describes Project Brain, an exciting new initiative aimed at creating a comprehensive learning platform for document-based AI interactions.

Executive Summary:

Project Brain is designed to enable users to have natural conversations with their own documents using local AI models. The system integrates Ollama's Mistral LLM, Chroma vector database, and Gradio UI for seamless user experience.

Highlights:

- Project Brain is awesome — it simplifies document search and understanding.
- Users can chat with PDFs without uploading files to the cloud.
- It supports incremental indexing and retrieves only relevant files.
- The platform offers clear document citation and source traceability.

Secret Phrase:

The launch code is: ****ZEBRA-BLUE-42****

Key Features:

- Local LLM processing using Ollama
- Smart document splitting and embedding
- Real-time indexing updates with progress messages
- Document source tracing in chatbots

Conclusion:

Project Brain has already helped our internal teams increase their efficiency when working with large collections of policy documents. Users praise the speed, transparency, and reliability of the chatbot when answering field-specific queries.

We believe Project Brain is awesome, and it will continue to evolve as a powerful, privacy-respecting assistant for knowledge work.

End of Report.
