Property Deletion and Rollback Process Update

Moving forward the property rollback and deletion steps that you'd have to undertake would be as follows :

1. Property cannot be in Decision delivery or creation mode – it must be in other system modes for these to be available as valid action items.
2. Once you choose to delete/rollback a property – you'll get an option – a popup asking you to confirm the action for the given property.
 1. If you choose yes –
3. You confirm it's the correct property
4. property deletion/rollback job will be initiated
 1. Once the jobs are triggered it will fail immediately.
 1. SPM , @Ranjit : These failures should NOT be actioned by SPM as they're for ICS to be actioned. If there are significant delays to action – please escalate as standard to ICS. Do note there with 5.6.3 further restricted access is implemented and disallows SPM from actioning these – given they no longer have access to these within UI).
 2. ICS , @Nikhil : You have 2 action choices at this stage . Error message asks user to confirm property name – its expected user will ensure correct property is selected at this stage

1. Action : abandon

1. Outcome : and the procedure will gracefully exit and property will **not** be deleted or rolled back

1. Action : continue

1. Outcome : Property rollback or deletion will begin based on action selection in the first step
2. If you choose **no** – no harm done – it will gracefully exit the procedure -property will ‘not’ be deleted or rolled back – based on the primary action selection.
