Rabbit MQ – Monitoring

This article will elaborate on Rabbit MQ Monitoring.

The Rabbit MQ page contains details of the channels which are hosted on multiple APP Nodes and are responsible for processing messages related to NGI

Rabbit MQ Consolidated View - Last Fetched At 2019-04-12 05:30:00.0 CST

Channel Name	MNSNGIAPP0101					MNSNGIAPP0102					MNSNGIAPP0103					MNSNGIAPP0104					MNSNGIAPP0105

The above image shows the Channels on the Left Column.

State This indicates the status of the Consumer (i.e is it running / idle)

Consumers This displays the number of consumers allocated to that channel

Ready The number indicates the count of messages which are ready to be processed, but not yet picked up by the consumer

Unack This number indicates the number of messages for which the acknowledgement is not received. This is usually because the messages are in processing .

Total This number is the sum of Ready and unack messages.

- The ideal threshold of each channel is less than 100 (except for htngActivityValidationResponseChannel)
- For htngActivityValidationResponseChannel, if the count across all the nodes (in total) increases above 10,000, ONLY then should be escalated to G3 Oncall Channel.
- If you observe that the number of messages for any channel for any node is more than the threshold, then you need to escalate it to the QA team/On Call Rotation channel.

Please let me know if you have any query.
