Resolving error type : stalenessAwareCalibrationServiceStep

We usually observe a failure in stalenessAwareCalibrationServiceStep Step, either for a CCFG failure, or a Force Sync Calibration failure.

If you encounter any such failures;

- Open the failure and go to Execution steps.
- You will find the affected table in the error itself. In the below example, it is 'ForecastGroup' (isForecastGroupDirty).
- Expand the failed step (stalenessAwareCalibrationServiceStep) and hover on the SASRequest xml.

Problem Details

Problem Summary - 193458

Job Instance Id : 11742302

Job Name : Comm Forecast Groups

Step Name : stalenessAwareCalibrationServiceStep

System Mode : Decision Delivery Mode

Creation Date : 02-Jan-2018 07:21:50 AM

Problem Id : 193458

Owner : Ambar Lankar

Creation Date : 02-Jan-2018 07:21:55 AM

Closed Date : 02-Jan-2018 09:36:20 AM

Duration : 02:14:24

Error Code : UNEXPECTED_ERROR

Node : us2p3ap21

Client Code : ESA Client Name : Extended Stay America

Property Code : BBSR1 Property Name : 9512 San Ramon - Bishop Ranch - West

Problem Description

OK to proceed : A difference has been detected between Tetris and Pacman in fgrms tables but isForecastGroupDirty is not set to 1.

```

■ <SASRequest xmlns="http://xml.common.pacman.tetris.ideas.com/schema/calibration/request/v1">
  <RequestHeader>
    <PropertyId>10168</PropertyId>
    <operationName>calibration</operationName>
    <resume>0</resume>
    <requestId>902d2a65-7b03-441f-af3a-0a86c16f6eff</requestId>
    <tenant_server>us2p3db23.ideasprod.int</tenant_server>
    <tenant_server_instance>G3SQL01</tenant_server_instance>
    <tenant_password>IDeaS123</tenant_password>
    <tenant_user>G3SAS</tenant_user>
    <tenant_database>010168</tenant_database>
    <tenant_db_port>1433</tenant_db_port>
    <dataset_path>C:/SAS/Data/Properties/10168</dataset_path>
    <componentRoom>false</componentRoom>
    <sas_debug>false</sas_debug>
    <rra>false</rra>
  </RequestHeader>
  <calibrationRequest>
    <caughtUpDate>2018-01-02T00:02:00.000-06:00</caughtUpDate>
    <fcstStartDate>2018-01-02-06:00</fcstStartDate>
    <fcstEndDate>2019-01-01-06:00</fcstEndDate>
    <staleness>30</staleness>
    <webRateAlias>3179</webRateAlias>
    <decisionId>16674</decisionId>
    <isCalib>1</isCalib>
    <isForecastGroupDirty>0</isForecastGroupDirty>
    <isSpecialEventDirty>0</isSpecialEventDirty>
    <isRoomClassDirty>1</isRoomClassDirty>
    <isWebrateDirty>0</isWebrateDirty>
    <isDemand360Enabled>false</isDemand360Enabled>
  </calibrationRequest>
</SASRequest>

```

In the XML, you will find the request as below;

- As per the error the expected should be **1** but the actual value is 0

```
<isForecastGroupDirty>0</isForecastGroupDirty>
```

- In this case check if *pacman.core.property.sync.syncRequiredForecastGroupsConfigurationChanged* is set to True.
 - Based on the error, the parameter to be changed could vary;
 - i.e for isSpecialEventDirty, it will be *pacman.core.property.sync.syncRequiredSpecialEventsChange*
 - For isRoomClassDirty, it could be *pacman.core.property.sync.syncRequiredAccommodationConf*

- For isWebrateDirty, it could be `pacman.core.property.sync.syncNotRequiredWebrateConfigurationChanged`
- If the parameter is already set to True, then try resuming the job.
 - If it fails, then set the parameter to false.
 - Save the configuration.
 - Now change it back to True and save it.
- Run the Sync now.

It should resolve the issue.

*** NOTE: Force Sync Calibration Job is valid only for 1 way or 2 way live properties.
 If the Failure is observed for a property which is in Data Population Mode, you can abandon the Job. DO NOT ESCALATE IT.***
