Scheduled NGI Data Extract Job Failure Resolution for Duplicate Key error

This document contains helpful tips about resolving the underlying issues causing failures on this job

Job Name: Scheduled NGI Data Extract Job
Step Name: ngiDataExtractGetScheduledNgiParamPropertiesChunkStep

Problem Detail

▼ Problem Summary - 1463342

Job Instance Id : 285819462

Step Name : ngiDataExtractGetScheduledNgiParamPropertiesChunkStep

System Mode : N/A

Creation Date : 15-Nov-2024 00:55:39 AM

Problem Id : 1463342

Owner : Sandeep Chauhan

Creation Date : 15-Nov-2024 01:08:49 AM

Closed Date : 15-Nov-2024 01:10:20 AM

Duration : 00:01:30

Error Code : UNEXPECTED_ERROR

Note : mnt5g3happ1105.ideasprod.int

Client Code : N/A

Client Name :

Property Code : N/A

Property Name :

Problem Description

java.lang.IllegalStateException: Duplicate key 7 (attempted merging values class com.ideas.betris.pacman.services.monitoring.dailyProcessing.entity.inputProcessing: 82316265 and class com.ideas.betris.pacman.services.monitoring.dailyProcessing.entity.inputProcessing: 82344276)

Investigation and Resolution Steps

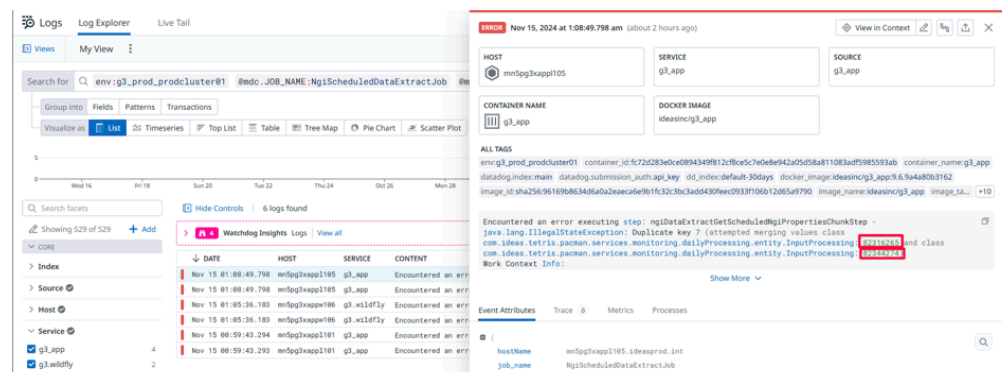

Step 1: View Logs 📄

- Access **Datadog** to review logs from the failed job, click the pin icon to open data dog logs.
- Search for the specific error message indicating a duplicate key issue.

Step 2: Identify the Duplicate Keys 🔍

- Look for the following error in the logs:

java.lang.IllegalStateException: Duplicate key 1 (attempted merging values class com.ideas.tetris.pacman.services.monitoring.dailyProcessing.entity.InputProcessing: 9972257 and class com.ideas.tetris.pacman.services.monitoring.dailyProcessing.entity.InputProcessing: 9992359)

Note: The InputProcessing ID will be multiple.

Step 3: Verify Duplicate 🔗

- In **G3 CMA**, run the following query on the **Global_PROD** for that production table to verify the duplicate records:

ngiDataExtractGetScheduledNgiPropertiesChunkStep-verify the duplicate records

Selected Query: **ngiDataExtractGetScheduledNgiPropertiesChunkStep-verify the duplicate records**

SFD Case:

☒ Select One or More Chains ☐ Import Property Codes

Prod Instances:

Select Chains:

Selected Delimiter:

Query Description: **ngiDataExtractGetScheduledNgiPropertiesChunkStep-verify the duplicate records**

Query Set:

```
SELECT * FROM input_processing WHERE Input_Processing_ID=@Input_Processing_ID
AND Input_Type = @Input_Type;
```

Query Parameters:

size = 2
Input_Processing_ID(Integer) **Insert Input_Processing_ID**

size = 2
Input_Type(String) **BDE or IDP - try both BDE and IDP**

For this query you can use the input processing id which you will find in Datadog logs.

Replace the IDs with those relevant to your investigation. This query will return records with duplicate Property_Daily_Processing_ID for the same processing_date.

Step 4: Delete Duplicate Records 🗑️

- Before deleting, run the query to check how many duplicate records you are deleting. Use the saved query:

ngiDataExtractGetScheduledNgiPropertiesChunkStep-Verify number of records to be deleted

- To resolve the issue, delete the duplicate record(s) using the saved query:

ngiDataExtractGetScheduledNgiPropertiesChunkStep-Delete Duplicate Records

Ensure you use the appropriate input_processing_id obtained from the error message.

NOTE – IF you face any difficulty or challenges while doing this activity please reach out to Sandeep Chauhan or L2 Support Team.
