Scheduled Reports Delivery Issue G3

Important Note:

In G3 world (Hilton, ESA and GA), report generation is independent of the BDE optimization (Whenever the report is scheduled, it will be delivered irrespective of the processing of the BDE extract based upon the data present for the criteria selected)

Case Query:

- **Scheduled reports Not Delivered:**
 - Check whether the report is scheduled Daily or Weekly or once in a month.
 - <http://us2p3ap06.ideasprod.int/solutions/schedule-reports#/p523> PROD 1
 - <http://us2p3ap21.ideasprod.int/solutions/information-manager> PROD 2
 - Select the Client>Property>Reports>Scheduled reports
 - Select the concerned report Click on View:
 - Check when the report was scheduled, in case the report was scheduled from a specific date, we may want to go back the client and ask to select “Immediately” rather a specific date, if applicable.

- Refer the below screenshot:

- If we find configurations are in place then we have to check the concerned report in Jaspersoft “<https://g3.ideas.com/jasperserver-pro/login.html>”
Username/Password “superuser”
 - Search for the property “ABEAW”, sort by Last modified. If the report is present there, it means the report is generated and successfully delivered to the designated user and we can inform the client.
- Check for any system outage and inform the client accordingly
- Check File size of attachment, refer first consideration from Client Response section
- If the client reverts and says it is still not delivered, we may escalate it to QA “Queue: IDEaSG3 QA” . Assign a task on the SFDC case.

- Client wants the **information to schedule a report**, we may ask the client to refer the help section. For eg. for “Pickup/Change and Differential Control Report” we may provide the link “[Pickup/Change and Differential Control Report](#)”
- Client response
 - We may want to include below mentioned points in the client’s response as per the concern raised and the investigation steps accomplished:
 - File size restrictions on the client e-mail server will need to be checked by the client. Usually client email servers have a size limitation of 10 MB for attachments.
 - Whitelist – Work with your IT department to add our mail server IPs (130.96.13.254 and 130.96.13.250), to your SMTP server whitelist to resume receiving email communications from IDEaS. (If this change is performed no further action needs to be taken.)
 - Report Delivery – Update scheduled reports to be delivered to an FTP or SFTP server. This can be done on the Scheduled Reports configuration screen within your IDEaS System. One may provide the steps with the help of below screenshot:

- On-Demand Reporting – Manually generate the reports that you currently have scheduled for e-mail delivery from within the IDEaS System.
 - This can be also cited as an interim solution while the investigation is ongoing
- Resetting Passwords – Contact your local System Administrator for any password resets or other password issues.
