What is a rate shopping file ↑

- Rate shopping file is typically an XML file that contains information about a hotel's competitor's rates that are provided by a vendor like OTA Insights or TravelCLICK etc.
- You can view this video to understand how competitor information that is present in such a file influences the subscribing hotel (subscribing with IDeaS in this case).
- https://ondemand.ideas.com/ILS_Files/G3Resources/078%20-%20Considerations%20for%20Rate%20Shopping%20Configuration/story.html

Structure of a Rate shopping file ↓

Troubleshooting for Rate Shopping file processing failure is listed below :

- This is split into multiple phases – follows the distribution as follow
 - identifying the rate shopping file that appears to have failed for processing
 - identify the associated error
 - investigate the causation

■

Issue symptoms: Duplicate entries in RSS file

- One of the features of the G3 environment is that it rejects duplicate entries . By extension, In the context of rate shopping - if a rate shopping file contains duplicate entries for the same competitor hotel for the same room type for a given channel , for one arrival, then such file is rejected - irrespective of the difference in status values i.e. "rate not available" versus "Rate closed" are treated if other values are similar , as duplicates.
- Symptom** : Error observed for Job failure may look like below
 - Tetris Errors: [0 - UNEXPECTED_ERROR - Unexpected error : Process Rolled Back - User.id: null - Workcontext: null] Cause : javax.ejb.EJBTransactionRolledbackException: org.hibernate.exception.ConstraintViolationException: could not execute statement Cause : javax.persistence.PersistenceException: org.hibernate.exception.ConstraintViolationException: could not execute statement Cause : org.hibernate.exception.ConstraintViolationException: could not execute statement Cause : com.microsoft.sqlserver.jdbc.SQLServerException: Cannot insert duplicate key row in object 'dbo.PACE_Webrate' with unique index 'UQ_PACE_Webrate'. The duplicate key value is (1, Jun 19 2018 7:24AM, 1, 3, 4, 1, 2019-06-11, 1)

Issue Sympton : Extracts are failing because of "no file found exception" 

- One of the features of the G3 environment is that it rejects duplicate entries . By extension, In the context of rate shopping - if a rate shopping file is sent again by the vendor, then such file is rejected . The duplicacy would be identified by the fact that the file names are identical. Currently in the G3 environment , large rate shopping files are split into smaller chunks for easier processing so any file is suffixed with a _o or _1 denominates that it is from a sequence of chunks of a larger file.
- Symptom** : Error observed for Job failure may look like below
 - java.io.FileNotFoundException: Source 'C:\G3DatarateshopperworkCRHG-MPMN_20170617_0000_RSS_0.zip' does not
