Updating a property name

This process should be used IF AND ONLY IF the property name update through the G3 >Configure>property specific > Manage Property Information **Fails**

If a property name does NOT update through the UI screen you can update the names directly in the property tables of the tenant as well as the global db.

1. identify the property id from the installation screen whose property id is to change . this is a critical step to ensure you’re updating the right property.
2. Run this query in CMA ON the **property** (it should NOT be global db/jobs db).
Example : select * from Property where Property_ID=<propertyid like 123456>
3. Run an update query
UPDATE Property
SET Property_Name = ‘new property name’ where Property_ID=<propertyid like 123456>
4. Run this query in CMA ON the **property** (it should NOT be global db/jobs db).
Example : select * from Property where Property_ID=<propertyid like 123456>

1. it should show the update name in the result – that implies the update worked for the tenant.
5. Run this query in CMA ON the **Global prod instead** (it should NOT be tenant DB).
Example : select * from Property where Property_ID=<propertyid like 123456>
6. Run an update query
UPDATE Property
SET Property_Name = 'new property name' where Property_ID=<propertyid like 123456>
7. Run this query in CMA ON the **property** (it should NOT be global db/jobs db).
Example : select * from Property where Property_ID=<propertyid like 123456>
 1. it should show the update name in the result – that implies the update worked for the tenant.
8. **Verification : Go to installation screen and the G3 >Configure>property specific > Manage Property Information both should show identical names.**
