VirtualPropertyPullExtractAnomalyJob

Hello Team,

This document illustrate the solution to handle the failure for the job VirtualPropertyPullExtractAnomalyJob with below error –

Sample Error :

org.springframework.batch.core.JobExecutionException: Anomaly detected for virtual property: VPCHIMC | Missing Extracts For: | Received extracts : CHIMI.20240518.2301.tar.Z,CHIMK.20240519.0301.tar.Z,CHIMC.20240518.2301.tar.Z

As we see in the error it says that the extracts are missing but there is no property code for missing extract.

By reading the error further we understand that the extracts are received but with different time stamp.

In this case, the extract for the property CHIMK has a different timestamp than other two properties

Problem Description

org.springframework.batch.core.JobExecutionException: Anomaly detected for virtual property: VPCHIMC | Missing Extracts For: | Received extracts : CHIMI.20240518.2301.tar.Z,CHIMK.20240519.0301.tar.Z,CHIMC.20240518.2301.tar.Z

This happens when –

- 1. there’s a DST change.
- 2. there’s a maintenance at the Hilton side.

To resolve this as a workaround we have a parameter
“pacman.extracts.time.difference.in.minutes”

This parameter nontrol the max time difference in minutes between two or more physical property extracts so that they can be merged in a single extract for the virtual property

We need to change the value of this parameter accordingly to cover the difference time.

For example, if it is set to 12o then it will cover the time difference of 2 hours (120/60=2). 120 is value set for parameter and 60 is minutes in an hour.

To cover the time difference of 4 hours the value for pacman.extracts.time.difference.in.minutes must be set to 240.

In above case there’s a difference of 4 hours in CHIMK.20240519.0301.tar.Z and other two extracts (CHIMC.20240518.2301.tar.Z and CHIMC.20240518.2301.tar.Z).

To resolve this time difference –

- 1. set the value for pacman.extracts.time.difference.in.minutes as 240 from the configuration screen.

5. Search for the active JEMSPULLExtract Task.

6. Click on Action > Run Now.

7. This will trigger the MergeCRSExtractJob and further processing jobs.

8. revert the pacman.extracts.time.difference.in.minutes to its default value. (In case it is 120).
